Who we are

Laminar Projects is a project management consultancy for organisations that want their construction projects completely controlled.

By pairing boots-on-the-ground project managers with the kind of tech talent found at a top-tier software firm, we provide our clients with visibility over everything that's happening and the ability to make every decision with unquestionable facts. Our services cover Project & Construction Management, Project Planning & Controls, and Data & Digital, and we advise and assist organisations from initial concept all the way up to handover. Within Data & Digital, this spans data collection and management through to automated reporting and software development.

With over 100 data centres and \$12bn+ of infrastructure and high-tech facilities delivered globally, we've proven that the most effective way to deliver complex projects is with great people, working as a great team.

Why we're different

Where most organisations optimise for financial outcomes or mission achievement as their primary aim, we exist to create an environment in which our people can flourish. This is not only the right thing to do, but by getting this right, other things like finances and mission have followed anyway. Everything is better because it's driven by a high-impact community of people connected through meaningful relationships, inspired to develop themselves, and empowered to pursue their own learning adventures. By first doing this, we achieve the highest levels of value for our clients and the world.
