Who are Laminar?

Laminar Projects is a project management consultancy for organisations that want their construction projects completely controlled.

By pairing boots-on-the-ground project managers with tech talent you'd find at a top-tier software firm, we provide visibility over everything that's happening and the ability to make every decision with unquestionable facts. Our services cover Project & Construction Management, Project Planning & Controls, and Data & Digital, and we advise and assist organisations from initial concept all the way up to handover. Within Data & Digital, this spans data collection and management through to automated reporting and software development.

With over 100 data centres and \$12bn+ of infrastructure and high-tech facilities delivered globally, we've proven that the most effective way to deliver complex projects is with great people, working as a great team.

What we bring to the table

We're deeply involved in projects that improve the sustainability and modernisation of the economy: nuclear, renewables, transport, utilities. We cut the waste on these projects, which decreases the environmental impact and means that government budgets can go further in developing the infrastructure we all rely on. A few examples of the big things we've been working on in the public sector recently can be seen below.

Small Modular Reactor

Tripled PMO operational efficiency and realised significant cost reductions through the implementation of a fully automated system.

HS2

Digitally transformed information management and robust work packaging while creating a true "digital culture".

Devonport Dockyard

Developed PMO and project control strategies, establishing integrated and centralised reporting as well as core governance framework, systems, analytics, and tools.

Why we are different

Where most organisations optimise for financial outcomes or mission achievement as their primary aim, we exist to create an environment in which our people can flourish. This is not only the right thing to do, but by getting this right, other things like finances and mission have followed anyway. Everything is better because it's driven by a high-impact community of people connected through meaningful relationships, inspired to develop themselves, and empowered to pursue their own learning adventures. By first doing this, we achieve the highest levels of value for our clients and the world.

G-Cloud 15 Service Descriptions

Cloud Software (Lot 2b)

Service name	Service description
Oracle Primavera P6 EPPM Cloud	Oracle Primavera P6 Enterprise Project Portfolio Management (EPPM) Cloud is a robust project planning solution that enables organisations effectively manage projects of any size and complexity. Its core scheduling functionality is complemented by the resource, cost and risk management capabilities. Leveraging cloud infrastructure, it centralises project data, fostering seamless collaboration.
Oracle Primavera Cloud (OPC)	Oracle Primavera Cloud integrates capital planning, scheduling, commercial, contract, cost, change and risk management into one user-friendly modern cloud platform that enables effective management of projects and portfolios of any size and complexity. This scalable, highly configurable solution drives performance, improves collaboration and enables organisations to make informed decisions.
Oracle Primavera Unifier Cloud	Oracle Primavera Unifier is a cloud-based project controls solution optimising capital projects and facilities management. It enhances project delivery, cost control, and collaboration with workflow automation and real-time analytics. Integrated with Primavera P6 and Oracle apps, it enables comprehensive functions including contract management, Earned Value Management, and document management.
Oracle Primavera Aconex Cloud	Oracle Aconex facilitates seamless collaboration, data sharing, and project record-keeping, enhancing visibility and control throughout the project lifecycle. With customisable workflows, secure document management, and integrated project controls, Aconex streamlines processes, boosts efficiency, and minimises disputes. Its mobile accessibility ensures real-time collaboration and data access from anywhere, optimising project management.

Cloud Support (Lot 3)

Service name	Service description
Digital Transformation & Data Strategy	Laminar's Digital Transformation & Data Strategy service helps you establish a data-driven culture by looking at data holistically to achieve your business or project goals. Our approach focuses on data requirements, data governance, expected project and business outcomes, building capabilities and functional architecture, all aligned with your overall business or project strategy.
BIM Consultancy	Laminar helps organisations across the value-chain deliver their projects more effectively, increase their organisational resilience and futureproof their work through the benefits of clearly defined and executed BIM strategies, in-line with ISO 19650. Our work covers the core principles of information management through the whole project life cycle.
Enterprise Data Platform on Microsoft Azure and Fabric	Laminar uses Microsoft Azure and Microsoft Fabric advanced data management capabilities to help organisations centralise data from disperse systems into a single, enterprise data platform. We pull data using API-s, then clean, validate, transform, organise and visualise it, enabling real-time insights and data-driven decision making for stakeholders at all levels.
Data Analytics & Power BI Development Services	Laminar helps organisations transition their existing reporting solutions to a fully automated cloud-based platform using the Power BI tool. We offer the full lifecycle of Power BI solution delivery and support and ensure that all reporting dashboards developed answer the key questions which enable effective strategic decision making in your business.

Service name	Service description
Digital PMO	Laminar's Digital PMO service provides a bespoke, scalable solution to the development and delivery of PMO services for capital programmes. Adaptable to NEC3, NEC4, agile, waterfall and hybrid delivery environments, we take a practical and collaborative approach to deliver the control and assurance needed to meet your organisational needs.
System Selection & Implementation	Laminar's System Selection & Implementation service provides a structured approach for evaluating, selecting and implementing capital project delivery systems covering scheduling, cost, risk, change, contract and information management tools. The service covers the full lifecycle from business case, requirements definition and market/vendor evaluations through to implementation planning and ongoing maintenance.
Project Planning & Controls	Laminar helps organisations plan projects from initial concept through to completion. We combine our engineering experience and digital skills to develop plans that are clear and functional. We ensure that interfaces are managed, sequences are optimised and progress is tracked to deliver projects in a clear and controlled manner.
PMO P3M3 Maturity assessment	Laminar carries out its proprietary Discovery assessment in conjunction with a P3M3 assessment by our qualified P3O and PMO CC consultants to diagnose and assess key points of improvement in developing a lean and effective Digital PMO focused on quick wins for sustainable growth.
