ATTAIN WORKFORCE COMMAND CENTRE

The Attain Workforce Command Centre is a scalable tool that can be used for a single organisation or for multiple organisations. This has been demonstrated through projects where NHS and social care organisations have been included from primary care, community, mental health and acute trusts to social care teams. As such the commercial model is scalable.

For one organisation the implementation and annual licence costs from £30,000 per annum, subject to a minimum contract term of two years. The implementation incorporates data upload, data validation and baseline analysis. The annual licence includes monthly data refreshes and appropriate solution development upgrades.

For multiple organisations a discount is applied, up to 50% of the total costs, dependent on the scope and scale of deployment.

If requested by a customer it is possible to undertake customisation development, this will be agreed with the customer in line with the Terms and Conditions. All costs are subject to VAT.
