

AKITA

Cloud Consultancy Services

Cloud environments deliver flexibility, scalability, and speed — but only when they are designed and governed effectively.

Some organisations adopt cloud without a clear strategy for cost control, security, or long-term value. Over time, this results in rising spend, increased complexity, and heightened risk.

Akita's cloud consultancy helps public and private sector organisations regain control of their cloud estate. Combining strategic insight with hands-on technical expertise, we ensure cloud adoption delivers measurable business outcomes.

About Akita's Cloud Consultancy

Akita's consultancy assesses public and private cloud environments, defines strategy, plans migrations, optimises performance, enhances security and governance, and advises on actions to accelerate business value.

Our consultants support organisations at every stage of cloud maturity — from initial planning through to optimisation of complex hybrid and multi-cloud environments. The service provides practical, vendor-aware guidance aligned to operational needs, regulatory requirements, and long-term business goals.

With expertise across infrastructure, security, compliance, and cloud-native services, Akita helps organisations build cloud platforms that are resilient, scalable, and commercially sustainable.

Our Approach

- Align cloud decisions to business priorities, risk appetite, and technical constraints.
- Assess cloud and on-premise environments to identify inefficiencies, risks, and improvement opportunities.
- Define a clear cloud strategy and roadmap covering architecture, governance, and cost control.
- Plan and oversee migrations to maintain security, performance, and operational continuity.
- Optimise cloud usage post-migration to improve resilience, security, and value.

Cloud Consultancy Benefits

- **Strategic Clarity:** Define a clear, outcome-focused cloud strategy aligned to business objectives.
- **Cost Control:** Identify waste, optimise consumption, and improve financial governance across cloud platforms.
- **Security & Governance:** Strengthen security posture, compliance, and operational controls in public and private cloud environments.
- **Migration Confidence:** Plan and deliver cloud migrations with reduced risk and minimal operational impact.
- **Performance Optimisation:** Improve availability, resilience, and performance of cloud-hosted systems
- **Independence:** Vendor-aware, solution-agnostic advice focused on what is right for your organisation.
- **Flexibility:** Engage consultancy support as a one-off engagement or as ongoing strategic guidance.
