

# AKITA

## ISO/IEC 27001 Compliance Consultancy

Akita's ISO/IEC 27001 consultancy supports organisations in achieving and maintaining a robust, auditable information security management system (ISMS).

Our service is designed to reduce risk, improve governance, and provide clear assurance to customers, partners, and regulators that information security is managed effectively.

### ISO 27001 Readiness & Design

Akita begins with a structured gap analysis and readiness assessment to understand current security maturity and alignment with ISO/IEC 27001 requirements. This informs ISMS scope definition, control framework design, and the development of a tailored implementation roadmap.

Information security risk assessments are conducted to identify threats, assess impact, and define proportionate treatment plans aligned to organisational priorities.

### Policy, Controls & Implementation

Akita supports the development of policies and procedures aligned to ISO 27001, ensuring documentation is practical, relevant, and auditable. This includes creation and ongoing maintenance of the Statement of Applicability, alongside alignment of security controls across on-premise, cloud, and hybrid environments. Remediation actions are tracked to ensure gaps are addressed effectively and progress remains visible.

### Audit & Ongoing Compliance Support

The service includes preparation for internal audits, support gathering audit evidence, and guidance through independent certification audits. Beyond certification, Akita provides ongoing ISO 27001 advisory support to help organisations maintain compliance as technology, risk, and regulatory requirements evolve.

### ISO / IEC 27001 Consultancy Benefits

- **Audit confidence:**  
Reduces the risk of audit failure through structured preparation
- **Faster readiness:**  
Accelerates ISO 27001 implementation with a clear, phased approach to compliance
- **Stronger governance:**  
Improves accountability and consistency across information security management
- **Cloud alignment:**  
Ensures security controls are appropriate for cloud and hybrid environments
- **Risk reduction:**  
Lowers operational and compliance risk through formalised controls
- **Audit readiness:**  
Improves the quality, consistency, and availability of audit evidence
- **Sustained compliance:**  
Supports ongoing ISO 27001 compliance rather than a one-off certification exercise
