

About Us

An Independent Technology Consultancy

Award-winning, carbon-negative, SME consultancy delivering top-tier digital transformation across private and public sectors, leveraging our independence to meet diverse client needs.

Technology Specialists

A passionate team with a profound understanding of technology, delivering user-centred solutions to generate lasting business impact.

From Strategy to Delivery

We guide digital transformation projects from inception to live, ensuring comprehensive support and impactful results.

PurpleCube AI

PurpleCube AI is a cloud-native unified data orchestration platform that streamlines data engineering and accelerates analytics using generative AI. It enables organisations to compose, schedule, automate, and monitor end-to-end data pipelines across disparate data sources and environments.

Data engineers... data scientists... data architects... data executives. All data, all workloads, all architectures...

The platform unifies data engineering functions including extraction, transformation, integration, metadata management, and governance-on a single interface, reducing the need for multiple specialised tools. Real-time generative AI assists with pipeline development, enrichment, data quality, and natural language interactions, lowering dependency on manual coding.

It captures comprehensive metadata automatically and supports drag-and-drop development, SQL, and custom code, enabling rapid deployment of fully optimised data workflows. It also provides mechanisms for monitoring, self-healing, and optimisation of mission-critical pipelines.

It supports seamless connectivity to a wide range of structured & unstructured data sources enabling business users & analysts to query data using natural language. Built-in governance & metadata features improve discovery, quality, and trust.

PurpleCube AI is suitable for cloud, hybrid, or on-premise deployment and is designed to support large-scale data operations while enhancing automation, collaboration, data quality, and insight delivery.

Axoma

Axoma is an enterprise-grade AI acceleration platform designed to help organisations build, deploy, and scale Generative AI use cases with speed, security, and governance.

It provides a **unified framework** that brings together multiple LLMs, enterprise integrations, AI agents, workflows, and data grounding through Retrieval Augmented Generation (RAG) all in one platform. Axoma eliminates the complexity of managing fragmented AI tools by offering centralized model management, cost controls, role-based access, and multi-tenant architecture.

With Axoma, enterprises and partners can move beyond experimentation to deliver real, **production-ready AI solutions that drive measurable business outcomes.**

Axoma is cloud-agnostic, scalable & secure by design. With a **Unified Model Gateway** supporting multiple LLM providers and pre-built enterprise integrations (ServiceNow, Salesforce, Jira, etc.). Axoma has a multi-tenant architecture with strong data isolation and role-based access control (RBAC) for governance.

Data, Analytics & AI Services

As well as supplying cloud software, Bulien offer expert data & analytics services across a variety of platforms and specialise in how they integrate with the other systems and applications within an organisation's data ecosystem.

Consultancy days can be used for a variety of tasks from onboarding through assisting with use case development to support. Business Intelligence, Analytics, and AI platforms are inherently collaborative, and we strongly believe that this extends to the training and development side as well.

When customers get the most out of AI, data & analytics, it is typically where we've worked together (at least to begin with) to help develop the skills rapidly and to offer direction in how to approach the many data challenges that organisations face.

Expert Consultancy Services

We offer a broad spectrum of services relating to data and the technology vendors that we partner with.

- Strategy & Advisory services
- Guided trials
- Proof of Concept/Proof of Value
- Classroom training
- Workshop training
- Migrations & On/off-boarding
- Bespoke connector builds
- Coding, AI & ML expertise
- Design, Architecture & Governance
- Data enrichment & enhancement
- Project Management
- Implementation
- Visualisation
- Development
- Collaborative Development
- Support & Maintenance
- Agentic AI embedding & integration experience
- Public & Private LLM integration experts
