About this pricing model

This pricing model has been designed in collaboration with councils. Its goals are:

- To make PlanX as affordable as possible for councils.
- To reflect council size, so it is fair to small authorities.
- To put councils in control, avoiding 'vendor lock-in'.

Total cost of Plan X

The cost of Plan X is split into two parts.

1. Upfront cost

Annual subscription cost. This is priced in three bands, based on the total number of planning applications received in the last year, according to the latest live tables.

Small councils	Smallest 25%	£10,000 +VAT
Medium councils	Middle 50%	£15,000 +VAT
Large councils	Largest 25%	£20,000 +VAT

2. Service charge

Councils charge an additional service charge on every application that carries a fee of £100 or more. This is passed back to the supplier on a quarterly basis to help cover the cost of the service.

Once the total amount of service charges collected in a year exceeds £10,000, half of all subsequent service charges are discounted from your next subscription. This means that, if enough people use your Plan X services, it can effectively pay for itself.

£40 +VAT
per application

Or you can opt-out of service charges for an additional upfront cost
