Company Overview

At Encordia Consulting, we specialise in crafting innovative web applications that drive digital transformation for businesses. Our expertise lies in simplifying the complex process of web app development while adapting to the unique needs of each project. We understand that successful web apps are not just about technology; they are about creating seamless user experiences that align with your business objectives.

With a focus on delivering right-first-time solutions, we invest significant energy into architecting web apps that are not only user-friendly but also scalable and cost-effective. We quickly turn concepts into reality, providing proof-of-concepts and full-scale solutions across various web platforms.

Over years of experience in web app development, we have refined our methods and tools to accelerate and simplify the delivery of our solutions. From concept to launch, we ensure that your web app meets the highest standards of quality and performance.

At Encordia Consulting, we are passionate about web app development, and we deliver on our promises. Let us help you transform your business through innovative web solutions tailored to your needs.

Web Applications

Encordia Consulting offers comprehensive services for building web applications, ensuring seamless integration and optimal performance across all devices and platforms.

Features

Benefits

- Right-first-time approach with highly experienced teams
- Pragmatic solution delivery balancing process design and solution capability
- Alignment with strategic business objectives
- Alignment to best practice frameworks
- Multi-technology capable with leading practice tooling
- Web and Mobile friendly delivery from the same app

Planning

Implementing web applications requires meticulous planning to ensure successful delivery aligned with business objectives.

Our planning approach includes:

- Breadth and depth of activity required for successful delivery
- Approach planning, including Proof of Concept, Branding, rollout options, and delivery methodology
- Architecture and design of the to-be model
- Requirements gathering and analysis
- User centric design planning, including workshops and iterations
- Test phase planning, including integration test, UAT, Performance and Non-Functional testing
- Stakeholder engagement and management
- Training

Training

As part of managing the transformation to web applications, we undertake training needs analysis and prepare a comprehensive training plan to support the implementation of change within your organisation.

Our preferred approach is, where possible and appropriate, to partner with your business and work closely with the delivery professionals in your organisation, performing ongoing knowledge transfer throughout the delivery. This reduces the need to perform end-of-delivery knowledge transfer, thereby reducing the need for training within the delivery and implementation teams.

Setup and Publication

Encordia Consulting is dedicated to assisting you throughout the process of app development, ensuring your app is prepared and successfully placed on the correct platform. We understand the importance of delivering value every step of the way and work closely with you to ensure your app meets the necessary standards for deployment.

Quality assurance and performance testing

At Encordia Consulting, our approach to quality assurance and performance testing for app delivery is comprehensive and meticulous. We prioritise ensuring that your app meets the highest standards of quality and performance, providing you with confidence in its reliability and functionality.

Our testing process includes:

- Test strategy and approach – development of an end-to-end testing strategy, including full requirement traceability, appropriate test framework, setup and use of test harnesses, test phasing, test data management, tooling and execution management
- Development of a test harness – determination and setup of tooling and processes required to drive repeatable, production-like, and efficient test execution
- High volume test management with execution performance, bottleneck management and performance tuning

- Test Execution and management – Encordia can lead or assist your team, contractors or other suppliers through the preparation and execution of all test phases, ultimately leading to a successful cutover and go live.

Ongoing Support

Types of service supported:

- Buyer hosting or software
- Hosting or software provided by your organisation
- Hosting or software provided by a third-party organisation

We provide comprehensive support for a diverse array of platforms, including major cloud hosting services such as AWS and Azure, as well as many software services with recent projects including Firebase, Cloudflare, Vercel, and Netlify. We can enable monitoring on platforms allowing us to monitor operational status and identify areas needing attention. This capability ensures you are well-informed about performance issues, stability concerns, and errors, facilitating timely interventions. Additionally, we monitor the lifecycle of all services to safeguard against the risks associated with End-of-Life. Upgrading outdated components is crucial to security and functionality, which forms an integral part of our service management. Cost management is another critical aspect of our support. We implement strategies to optimise spending and improve resource allocation, ensuring you get the most out of your investments in these platforms. Through tailored solutions, we help you balance performance, cost-efficiency, and scalability.

Our commitment to you

At Encordia Consulting, our team brings a wealth of experience in delivering successful web app projects. With a track record of handling all sizes of App delivery.

We serve as trusted advisors to our clients, providing unparalleled expertise and unwavering integrity. From the outset, we focus on setting up web app delivery programs for success, ensuring that we understand your objectives and deliver on our promises.

Recognising that each project is unique, we tailor our approach to meet your specific needs, leveraging our experience, pragmatism, and flexibility to achieve your desired outcomes efficiently and effectively.
