

All our consultants have delivered large, complex, and difficult projects. We are trusted advisors with the experience and track record to match. We are client focused and conscientious with deep integrity.

We setup transformation programmes to deliver successfully right from the start. We create the best solution for you, and we always deliver on our promises.

Similar projects can have different objectives. We find out what your success looks like, and we use our experience, pragmatism, and flexibility to tailor our approach and style to your specific needs.

Cloud Health Check

Company Overview

At Encordia Consulting, we specialise in making complex transformations a reality. Through a clear approach, we simplify the delivery process and adapt to your particular needs. We understand that large transformation programmes are truly about business change backed by IT automation. We focus on clearly identifying the true business need and translate that into intelligently architected processes and systems that are deliverable, scale effectively, don't cost the earth and above all, meet your business objectives. We believe in right-first-time delivery and put significant energy into architecting the best solution across business process, infrastructure, data and software.

We have offshore delivery teams that are able to quickly provide proof-of-concepts through to full-scale solutions across the breadth of the digital enterprise. Our teams are experts at smoothly delivering modern-day services using Cloud technology in complex environments.

Over our years of transformation delivery, we have created a series of methods and tools to accelerate and simplify digital front-office and back-office programmes. We have accelerators in the form of tried and tested delivery templates, proven methodologies and approaches which we adapt to your needs, structured health-check and assurance tools for business and technical assurance and migration tooling with templates to simplify and speed up the end-to-end delivery.

We are passionate about delivery and we deliver on our promises.

Cloud Health Check Service

Encordia offers a number of services to review the current state of cloud projects and provide guidance on their current state, opportunities to improve. Our collaborative approach reaches across all the domains of change, people, process, information, applications, security, and technology. Encordia provides a fully independent, informed and data-driven health-check and assurance service.

Features

- Structured, data-driven health-check against the CAF
- Covers Programme Management, Technical Solution and Transition Planning
- Cloud architecture, design, technical assurance of the to-be solution
- Delivery planning and costing review
- Migration review, including configuration and data
- Gap analysis and cloud maturity model
- Vendor and package validation against requirements
- Business delivery and rollout planning review
- Validation of benefits management and realisation approach
- Operating model review

Benefits

- Ensure alignment with strategic business objectives
- Ensure optimal architecture design for the cloud options selected
- Ensure organisation is well placed to take advantage of Cloud
- Improved efficiency and structure
- Increased visibility of costs, with potential cost reduction
- Covers GCP, AWS, Azure providers and hybrid

Planning

Encordia takes a pragmatic approach to planning which is specific to the needs of each client and based on our experience from previous projects. Our approach is always tailored to the client's technology landscape and business environment, focused on helping them define the appropriate milestones and reach their desired outcome. Our approach assists in three ways:

- Reviewing your Cloud Strategy and Operating Model to help ensure that implementation appropriately covers all necessary aspects of people, process, technology, and data
- Conducting Cloud Readiness Assessments - leveraging our experience of multiple cloud platforms and services to determine likely success of a future implementation
- Consultants from our Delivery Leadership practice to help formulate suitably detailed plans and coordinate activities for a successful implementation. Our planning service can be tailored to work with specific services supporting different technologies.

Training

Encordia provides a range of training depending on the solution implemented, from instructor led to online paced learning. For more generic out of the box solutions we leverage training directed by our partners (e.g. AWS, MS Azure, UI Path, Blue Prism etc) and for more customised solutions we design training from the ground up, tailored to the needs of your employees.

Setup and migration

Our assurance services cover the entire lifecycle of the delivery, and the services can be undertaken at any stage of the lifecycle. We have a framework and approach to assess delivery services and suppliers in a structured, pragmatic, and independent manner providing sponsors and stakeholders with independent, honest, actionable feedback. We assess programme structure and setup, execution performance, supplier performance, architecture and design, alignment of delivery to outcome (likelihood of achieving the desired outcome) and assessment of key issues, risks and mitigation / action required to resolve. As part of our software development and migration quality assurance we can provide performance testing services including:

- Ensuring organisation is well placed to take advantage of Cloud
- Improved efficiency and structure
- Producing and executing a tailored test strategy and approach
- Development of a performance test harness
- High volume test management with execution performance
- Bottleneck management and performance tuning
- End-to-end test execution
