CHALLENGE

Organizations need to be confident that their data is readily available across their entire environment, whether on-premises, in the cloud, in multiple clouds, or in hybrid environments. They need help to ensure data availability and avoid costly data loss scenarios.

- Point solutions have limited protection and create data silos
- Additional point solutions are often needed as your data infrastructure evolves, which creates even more segregated data silos
- Segregated data leads to inefficiencies, longer go-to-market cycles, and increased storage costs
- Quick, complete, and cost-effective data access, protection, and recovery is critical for business planning and operation
