

Portable Identity Orchestration

CENDA BY CONDATIS

Pricing and service information

*protecting organisations, **connecting people***

Pricing overview

- Cenda is a decentralised identity platform that simplifies the orchestration of decentralised & portable identity user journeys.
- The platform is a system-neutral solution, providing verifiable credential capabilities in a common standards-based manner, supporting easy integration with multiple verifiable credential types, ecosystem solutions or identity verification service providers without being locked into a specific vendor.

Pricing Information

- Cenda is a Software as a Service (SaaS) or client hosted cloud-based platform. The pricing consists of two components:
 1. Subscription fee
 2. Usage fee
- The subscription fee is a fixed fee. The features and service provided will be defined in agreement of this fee.
- The usage fee is a transactional fee based on verifiable exchanges. A verifiable exchange is either an issuance or a verification of a decentralized digital credential. Verifiable exchanges can be purchased in blocks with volume discounting available to ensure your costs are fair, understood, and consistent.
- Please contact us to discuss your requirements, view a demonstration and to receive a personalised quote.
