

Posit Enterprise Planning, Training & Support

Roll-out planning, workflow review, training and
on-going support for Posit's commercial products

What is an Analytical Platform?

Modern organisations collect and use large amounts of data. An Analytical Platform is a combination of software tools which enable analysts and data scientists to analyse data and create analytical tools to support decision makers, e.g.

- Automated reports
- Interactive dashboards
- Web apps
- Web APIs

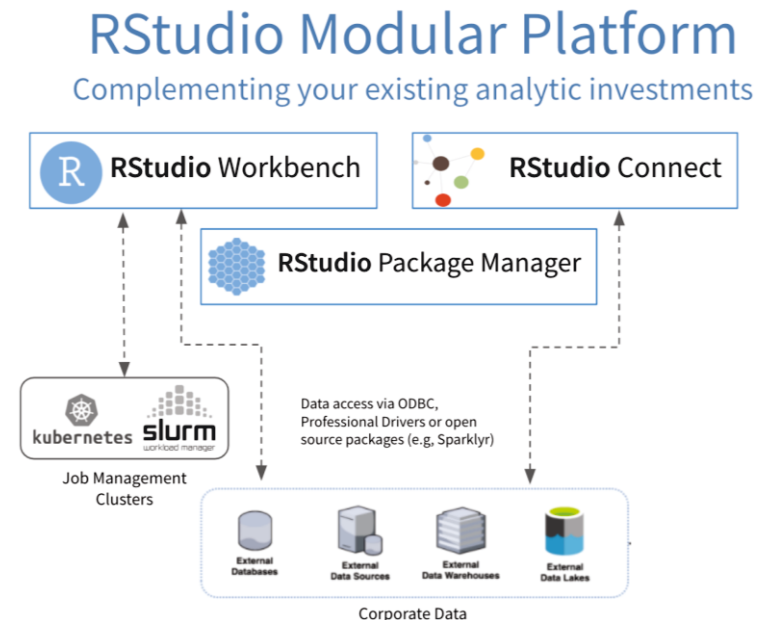

We provide support for Posit (formally known as RStudio) commercial products which, used together, provide an Analytical Platform which allows analysts to develop in R or Python, with results easily and controllably shareable.

Posit offer three separate products, available individually or as a bundle.

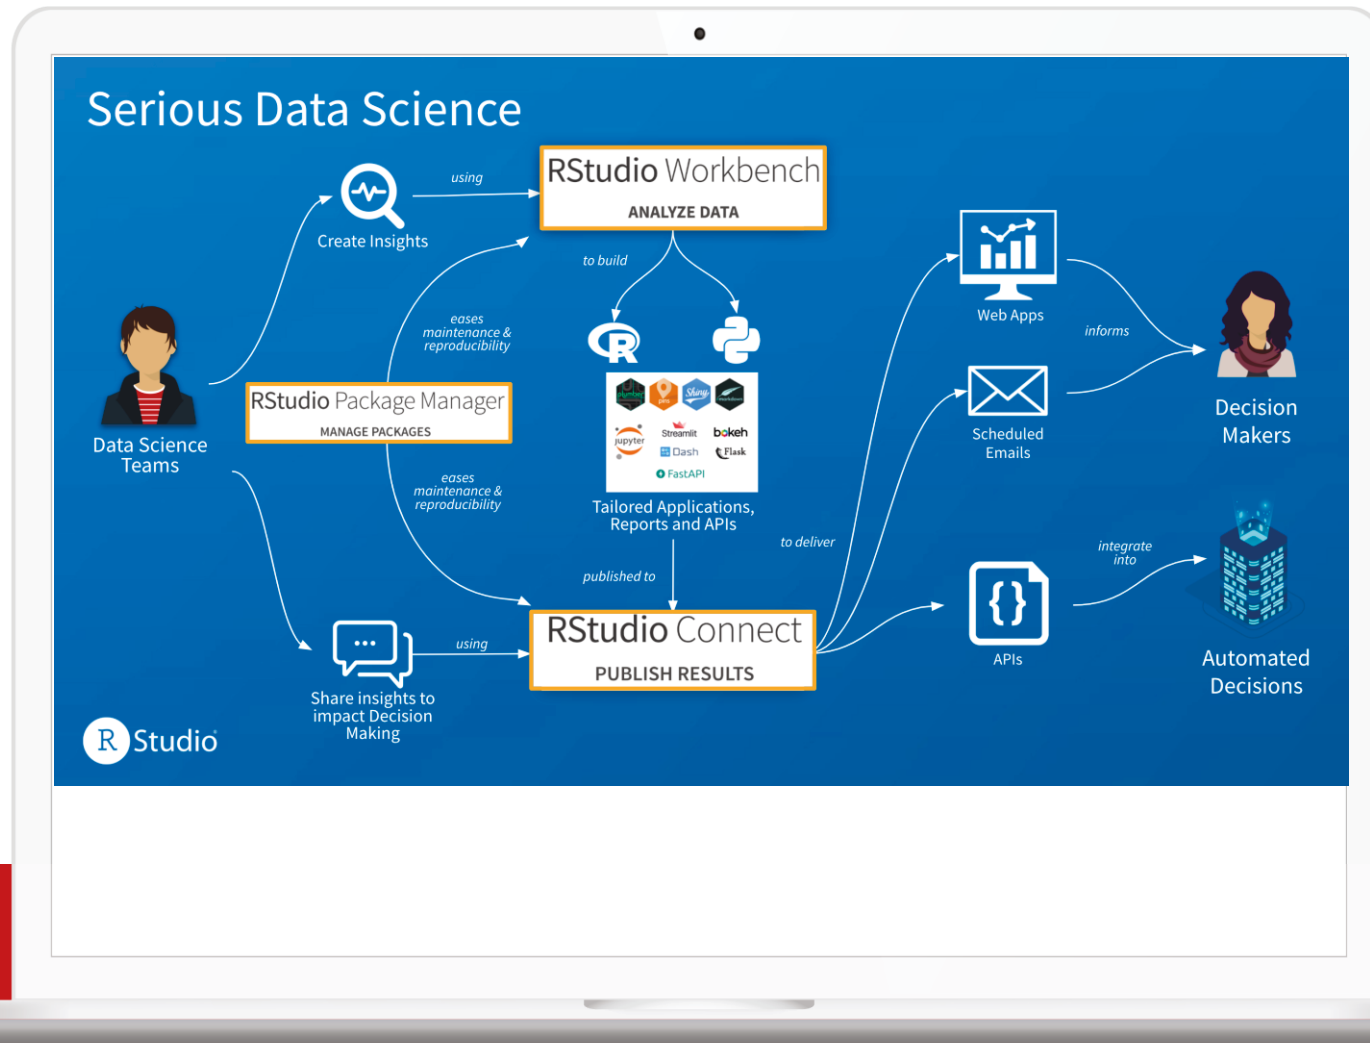

Posit Workbench – allows development of content in R or Python using the RStudio IDE, Jupyter Notebooks or VS Code

Posit Connect – allows developers to share content with a wider user-base

Posit Package Manager – ensuring that developed content uses only approved code libraries

An Analytical Platform based on Posit software

Why choose Hartley McMaster?

30 years experience helping clients make more informed decisions through data analysis, data science, and scenario modelling.

Our values:

1. Always delivering value
2. Providing a solutions that fits the problem
3. Working with you, not just for you

We have over 10 years experience with Posit products. We use Posit's tools every day, for clients and for ourselves. This wealth of real-world experience allows us to:

- Help you tailor your Posit set up to fit your size and needs
- Integrate your Analytical Platform with your existing data and infrastructure
- Support your staff to maximise their productivity and the value they extract from your organisation's data

Features & Benefits

Features

- Scoping your Posit deployment to fit your needs and budget
- Integration of Posit products with your existing ERP systems and databases
- Integration of Posit products with other tools including Tableau, PowerBI
- Support designing and implementing effective analytical workflows
- Training and development of analysts and data scientists
- Support migrating Excel / legacy models to R or Python
- Analytical Quality Assurance auditing
- Documentation of data models and data dictionaries

Benefits

- More effective planning through the best use of data available
- Benefit from our 30 years' experience building analytical models
- Integrated and automated modelling reduces errors and frees up time
- Models which can be readily extended or adapted if required
- Solutions built to leverage your existing cloud and legacy infrastructure
- Gain a better understanding of data quality
- Maximise the value gained from your investment in Posit's software

Product Options

We sell a packaged product and service built around Posit's own commercial products. This can include, in any combination:

1. Support in planning, installation and integration with existing systems
2. Training in how to use Posit products effectively
3. Maintenance and support for Posit products
4. Migration of business-critical reports, dashboards and analytical models onto an Analytical Platform using Posit products

We quote for Posit planning, training and support on a time and materials basis, based on client requirements.

Training & support packages

As an alternative to one-off project-based support, we also offer support packages (with a one-year minimum term).

A longer-term relationship reduces the 'learning curve' impact of shorter engagements, enables us provide an even better service.

	Basic	Pro	Enterprise
	from £12k pa ~£200 p/dev/month ≤ 5 developers* ≤ 20 users	from £30k pa ~£125 p/dev/month 5-20 developers 20-100 users	POA >20 developers >100 users
