WHAT WE DO

Agile Delivery is a UK consultancy that helps leaders **gain confidence that transformation is **under control**.**

We work at the point where strategy meets delivery, bringing clarity to priorities, tightening governance, and stopping value leakage. The result is calmer, more focused programmes that deliver outcomes you can stand behind.

Digital & Technology

Digital and Technology services support organisations to modernise systems and deliver cloud-enabled change. We provide digital strategy, legacy modernisation, cloud migration, data and analytics, DevOps and agile delivery. Our approach improves resilience, scalability and decision-making while enabling sustainable adoption of new technologies.

Features

1. Define business-aligned digital and technology transformation strategies.
2. Modernise legacy systems to reduce risk and technical debt.
3. Plan and deliver secure, scalable cloud migrations.
4. Enable cloud-native architectures for resilience and scalability.
5. Implement agile delivery and DevOps for faster value realisation.
6. Design and deliver data analytics and BI dashboards.
7. Integrate data across systems to improve decision-making.
8. Optimise platform performance, cost, and operational efficiency.
9. Govern technology change through structured delivery and controls.
10. Enable adoption through effective technology change management.

Benefits

1. Deliver faster, more resilient digital services aligned to business needs.
2. Reduce technical debt through structured legacy modernisation.
3. Enable scalable, secure cloud platforms supporting future growth.
4. Improve decision-making with real-time, trusted data insights.
5. Accelerate delivery through agile, DevOps-enabled ways of working.
6. Enhance system performance, stability, and operational resilience.
7. Reduce disruption and risk during technology migration and change.
8. Increase productivity through automation, integration, and optimisation.
9. Strengthen governance, compliance, and visibility across digital platforms.
10. Achieve sustained adoption of new technologies and ways of working.

Digital & Technology

Digital Transformation

Digital Transformation services from Agile Project Delivery help organisations modernise systems, unlock data value, and accelerate delivery. We combine cloud computing, agile project management, and legacy system transformation to drive scalable, cost-effective change. Our approach integrates strategy, technology, and delivery to align with business priorities. The result is improved agility, reduced technical debt, and faster time to value.

Features

1. Develop business-aligned digital transformation strategies
2. Modernise legacy systems to reduce technical debt
3. Migrate infrastructure and services to cloud platforms
4. Implement agile project delivery at scale
5. Enable continuous delivery through DevOps adoption
6. Integrate data analytics to drive decision-making
7. Improve system performance and user experience
8. Enhance scalability through cloud-native architectures
9. Align technology change with organisational goals
10. Strengthen governance across digital initiatives

Benefits

1. Deliver faster, more efficient digital service capabilities
2. Enable scalable systems aligned to business growth
3. Reduce technical debt through structured modernisation
4. Improve decision-making with real-time data access
5. Accelerate delivery using agile project frameworks
6. Enhance customer experience across digital channels
7. Strengthen operational resilience through cloud migration
8. Increase productivity via automation and integration
9. Support continuous improvement through data-led insights
10. Align technology change with strategic business objectives

Legacy IT Systems Upgrade & Migration

Legacy IT Systems Upgrade & Migration services from Agile Project Delivery help organisations modernise outdated platforms to improve performance, reduce risk, and unlock value. We take a structured, low-risk approach that combines agile delivery, cloud migration, and legacy system transformation. Our teams prioritise business continuity while enabling scalable, future-ready architecture. The result is a cost-effective, resilient digital foundation that supports long-term growth.

Features

1. Assess legacy landscape and prioritise modernisation needs
2. Develop risk-managed upgrade and migration strategies
3. Migrate critical systems with minimal business disruption
4. Replace outdated platforms with scalable cloud solutions
5. Improve system performance through targeted optimisation
6. Integrate legacy data into modern digital ecosystems
7. Apply agile delivery to accelerate implementation timelines
8. Ensure regulatory compliance throughout transformation process
9. Strengthen security with updated infrastructure controls
10. Support long-term sustainability with future-ready architecture

Benefits

1. Deliver modern platforms with improved performance and stability
2. Enable seamless migration with minimal operational disruption
3. Reduce long-term costs through system consolidation
4. Strengthen security with up-to-date infrastructure controls
5. Improve agility with scalable, cloud-ready architecture
6. Accelerate delivery using structured migration frameworks
7. Enhance data accessibility across integrated systems
8. Mitigate risk through phased transformation planning
9. Support compliance with current regulatory standards
10. Future-proof operations with sustainable technology solutions

Cloud Migration & Management

Cloud Migration & Management services from Agile Project Delivery help organisations move to the cloud with confidence, speed, and control. We design and deliver cost-effective, value-driven migrations using agile methods and secure cloud architectures. Our approach balances performance, resilience, and scalability while minimising disruption. The result is a future-ready digital environment that supports innovation, growth, and continuous delivery.

Features

1. Assess current infrastructure and cloud readiness
2. Define cloud strategy aligned to business goals
3. Migrate workloads using secure, scalable architectures
4. Optimise cloud performance and cost efficiency
5. Enable continuous delivery through cloud-native platforms
6. Implement governance frameworks for cloud operations
7. Automate deployment and infrastructure provisioning
8. Ensure security and compliance across cloud environments
9. Provide ongoing monitoring and environment management
10. Support hybrid and multi-cloud operating models

Benefits

1. Deliver secure, scalable cloud-based infrastructure solutions
2. Enable faster deployment through automated provisioning
3. Improve cost efficiency with optimised cloud usage
4. Strengthen business continuity with resilient architectures
5. Support innovation through cloud-native capabilities
6. Enhance agility with dynamic resource scalability
7. Reduce downtime through structured migration planning
8. Define governance for cloud operations and compliance
9. Accelerate transformation with simplified infrastructure management
10. Increase visibility through real-time cloud performance monitoring

Data Analytics & Business Intelligence Dashboards

Data Analytics & Business Intelligence Dashboard services from Agile Project Delivery help organisations unlock insights and make faster, data-informed decisions. We design and implement cost-effective, user-friendly dashboards that integrate real-time data across systems. Our approach combines agile delivery with cloud-based analytics tools to ensure scalability and accuracy. The result is improved visibility, stronger performance tracking, and smarter strategic planning.

Features

1. Design dashboards tailored to business objectives
2. Integrate data from multiple trusted sources
3. Visualise real-time performance across key metrics
4. Automate reporting to reduce manual effort
5. Build user-friendly, self-service analytics tools
6. Apply data governance and quality standards
7. Enable drill-down insights for better decision-making
8. Use cloud-based platforms for scalability and speed
9. Develop KPIs aligned to strategic outcomes
10. Support continuous improvement through data visibility

Benefits

1. Deliver real-time insights for faster decision-making
2. Enable visibility across key business performance metrics
3. Improve data quality through structured integration
4. Reduce reporting effort with automated dashboards
5. Defined KPIs aligned to strategic objectives
6. Support self-service access to actionable intelligence
7. Strengthen governance with trusted data sources
8. Increase agility through timely performance monitoring
9. Enhance stakeholder alignment with shared data views
10. Drive continuous improvement with measurable outcomes

Technology Change Management Programmes

Technology Change Management Programmes from Agile Project Delivery help organisations implement digital change with confidence, clarity, and control. We deliver structured, value-driven programmes that align people, processes, and platforms to transformation goals. Our approach combines agile delivery, stakeholder engagement, and technology enablement to manage complexity and minimise resistance. The result is sustained adoption, improved user experience, and long-term operational success.

Features

1. Define change strategy aligned to transformation goals
2. Engage stakeholders through targeted communications planning
3. Assess change readiness across teams and functions
4. Develop tailored change plans and delivery roadmaps
5. Enable adoption through training and enablement activities
6. Embed change champions to drive local ownership
7. Align change activities with agile delivery milestones
8. Monitor progress using change impact and adoption metrics
9. Address resistance through proactive interventions and feedback
10. Support long-term sustainability with reinforcement plans

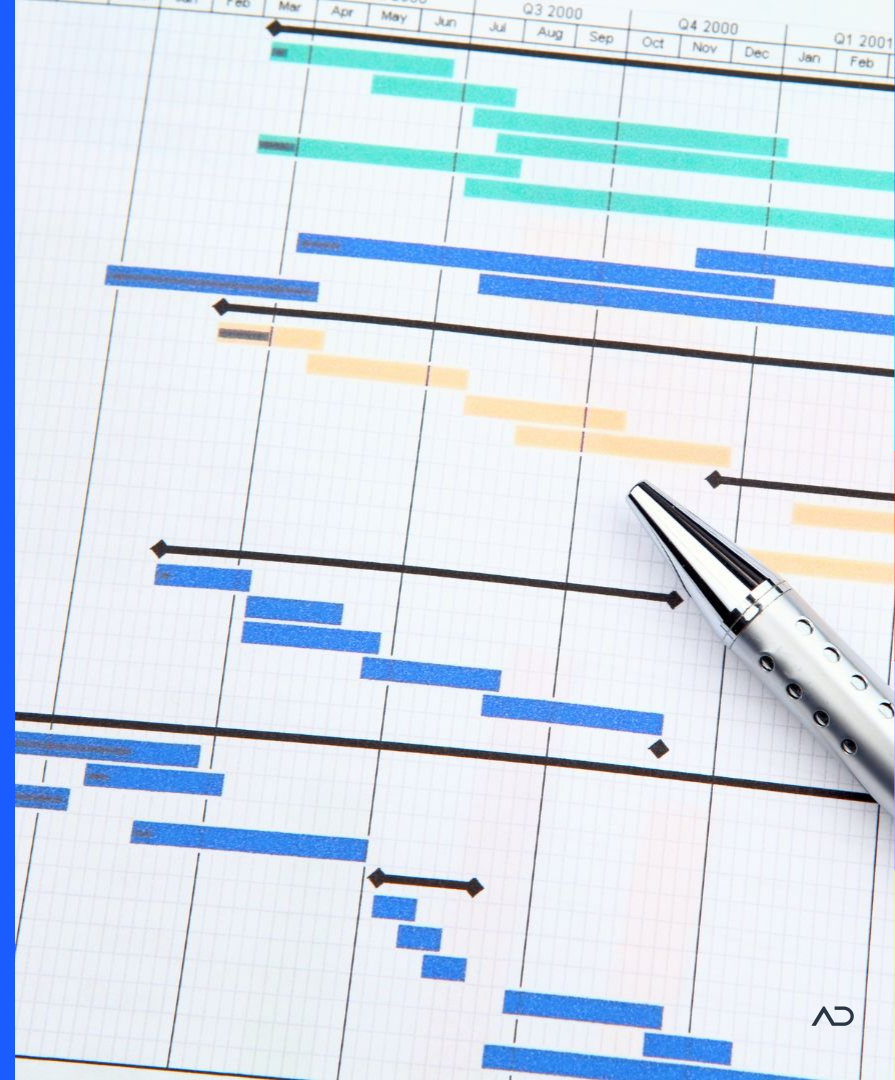

Benefits

1. Deliver consistent adoption of new technologies
2. Enable faster alignment across people and platforms
3. Reduce disruption through structured change planning
4. Improve stakeholder engagement and communication impact
5. Strengthen user confidence with targeted training support
6. Define clear roles to support local ownership
7. Drive behavioural change linked to transformation goals
8. Accelerate adoption with agile-aligned change delivery
9. Mitigate resistance through proactive engagement strategies
10. Sustain long-term impact through reinforcement activities

Accelerate Your Transformation

Case Studies

Agile Delivery

Turning Data into Discovery: Powering Clinical Insights with Intelligent Publishing

Developing an AI big data pipeline to enrich and commercialise unstructured journal data.

Problem

Publishing company needed to organise and enhance unstructured journal data for pharmaceutical clients, driving better clinical research insights and revenue. They sought an agile approach to create a robust AI pipeline, accelerating product innovation.

Approach

I led the development of a big data pipeline on an existing proprietary data platform, building 10 new microservices to organise, structure, and search journal content. This enabled targeted data offerings – grouped by subject areas – to boost ROI for life science research.

Impact

Enabled a global publishing company to launch the Text Journal product, generating an anticipated \$1M in annual revenue. Strengthened agile practices, enhanced offerings, and positioned the business as a leading data partner for global pharma clients.

Behind the Screens: De-Risking a Windows 10 Refresh for a Global Ad Group

Client-side leadership of a compliance-driven Windows 10 and hardware refresh across 3,000 devices, 30+ creative agency sites and multiple vendors

Problem

Microsoft ending Windows 7 support left a major ad group exposed: 3,000 ageing PCs across 30+ sites, messy asset data, mixed Windows/Mac estate and a sale where unsupported devices could undermine valuation and delay completion.

Approach

I led client-side delivery, brokering an outsourcing deal with Dell, aligning IBM on standard builds, and coordinating engagement managers, engineers and site leads to migrate data, refresh hardware and deploy Windows 10 across 30+ locations.

Impact

Within six months we upgraded or replaced 3,000 PCs, cut OS incidents by over 90% and lifted satisfaction by 8%+, leaving buyers with a fully supported, secure desktop estate and removing a compliance risk from the transaction.

Agile Project Delivery's Methodology

Agile Delivery

DELIVERY METHODOLOGY

Pre-Project / Strategic Initiation
High-level vision, objectives, and feasibility.

Project Initiation & Setup
Transforms strategic intent into a structured project.

Agile Delivery & Execution
Execution using the appropriate delivery methods when the groundwork has been laid.

Scaled Agile & Continuous Improvement
To ensure alignment for larger initiatives with multiple teams.

Social Values

Agile Delivery

We Build Community

Because meaningful engagement, shared knowledge, and accessible education shapes everything we do.

We Believe in the Power of Dialogue

Over the past five years, we've **hosted 16 Socratic Dialogues**—full-day explorations of essential human questions like **freedom, happiness, leadership, and responsibility**. Through these thoughtful conversations, we **enhance awareness**, cultivate **active listening** and **confident speaking**, and **inspire greater social engagement**.

We Champion Knowledge Sharing

In 2025 alone, we've **delivered three interactive sessions**: an overview of Agile and Scrum, a practical walkthrough of Jira, and foundational best practices for psychological safety in workshops. Together, these sessions have **empowered over 120 people**—making knowledge accessible, practical, and impactful.

We're Making Accessible Upskilling Accessible

In the past year, we've developed **five online courses**—covering PRINCE2, Agile and Scrum, Scaled Agile, mastering Jira, and successful facilitation skills. Designed to open doors into project and delivery roles, these courses have already **helped 45 people** build their careers in 2025 alone.
