WHAT WE DO

Agile Delivery is a UK consultancy that helps leaders **gain confidence that transformation is **under control**.**

We work at the point where strategy meets delivery, bringing clarity to priorities, tightening governance, and stopping value leakage. The result is calmer, more focused programmes that deliver outcomes you can stand behind.

Project & Programme Management

Project & Programme Management

Project & Programme Management supports the successful delivery of complex change. We provide traditional, hybrid and agile delivery leadership, including Scrum and SAFe, to plan, govern and execute programmes with confidence. Our approach improves predictability, alignment and outcomes across teams, suppliers and stakeholders.

Features

1. Define clear scope, objectives, milestones, and success criteria.
2. Plan and govern delivery using appropriate traditional or agile methods.
3. Manage risks, dependencies, and change through structured controls.
4. Mobilise and coordinate teams, suppliers, and delivery resources.
5. Deliver work iteratively, aligned to evolving business priorities.
6. Facilitate Scrum, SAFe ceremonies, and cross-team collaboration.
7. Lead PI planning to align strategy, execution, and dependencies.
8. Track progress using delivery metrics, reporting, and transparency.
9. Remove blockers and enable continuous improvement in delivery.
10. Support agile adoption and sustainable ways of working.

Benefits

1. Deliver projects predictably, on time and within agreed scope.
2. Improve planning confidence through clear milestones and governance.
3. Reduce delivery risk through structured controls and incremental delivery.
4. Enable faster delivery through iterative, value-focused execution.
5. Align teams and stakeholders around shared delivery objectives.
6. Increase transparency with clear reporting and delivery metrics.
7. Improve coordination across teams, suppliers, and dependencies.
8. Adapt delivery quickly to changing business priorities.
9. Strengthen stakeholder confidence through visible progress and outcomes.
10. Embed sustainable ways of working for long-term delivery performance.

Traditional Project Delivery

Traditional Project Delivery services from Agile Project Delivery help organisations manage complex initiatives with structure, control, and clear accountability. We apply PRINCE2 and other proven methodologies to plan, monitor, and deliver projects on time and within scope. Our approach ensures cost-effective delivery through risk management, governance, and milestone tracking. The result is predictable outcomes, stakeholder confidence, and business value realised.

Features

1. Define project scope, goals, and success criteria
2. Develop detailed plans with milestones and dependencies
3. Manage risk through structured mitigation strategies
4. Monitor progress using time, cost, and quality metrics
5. Apply PRINCE2 and waterfall-based delivery methodologies
6. Coordinate cross-functional teams and third-party suppliers
7. Ensure governance through stage gates and approvals
8. Control change requests via formal change management
9. Report status to stakeholders through structured updates
10. Deliver projects on time, within scope and budget

Benefits

1. Deliver projects on time and within scope
2. Enable structured planning with defined milestones
3. Improve predictability through stage-gated governance
4. Reduce delivery risk through formal risk controls
5. Define clear roles and stakeholder responsibilities
6. Ensure traceability through documentation and reporting
7. Control change effectively with structured processes
8. Support cross-team coordination and communication
9. Increase stakeholder confidence in delivery outcomes
10. Align delivery to business case and objectives

Agile Project Delivery

Agile Project Delivery services from Agile Project Delivery help organisations deliver value faster through iterative, adaptive project execution. We implement agile frameworks, facilitate Scrum and SAFe practices, and use agile metrics to drive continuous improvement. Our approach supports cross-functional collaboration, transparency, and flexibility. The result is accelerated delivery, improved responsiveness, and greater alignment with evolving business needs.

Features

1. Implement agile frameworks tailored to project context
2. Facilitate Scrum ceremonies and team collaboration
3. Plan and deliver in iterative development cycles
4. Align delivery with evolving business priorities
5. Drive continuous improvement using agile metrics
6. Manage backlogs and prioritise value-driven outcomes
7. Support SAFe PI planning and execution
8. Remove delivery blockers through servant leadership
9. Enhance visibility with real-time progress tracking
10. Enable faster feedback loops and adaptive planning

Benefits

1. Deliver value faster through iterative development cycles
2. Enable adaptive planning to meet changing priorities
3. Improve visibility with real-time progress tracking
4. Drive continuous improvement using agile performance metrics
5. Align teams around shared delivery objectives
6. Reduce risk through incremental delivery and feedback
7. Increase stakeholder engagement through regular touchpoints
8. Define clear priorities with backlog management practices
9. Support cross-functional collaboration across delivery teams
10. Enhance responsiveness to business and customer needs

SAFe Implementation

SAFe Implementation services from Agile Project Delivery help organisations scale agile practices across teams, functions, and portfolios. We lead structured SAFe rollouts, facilitate PI Planning, and embed agile governance using proven, value-driven methods. Our approach aligns delivery with strategy, improves coordination, and enhances transparency. The result is accelerated time-to-market, better portfolio oversight, and sustainable agile transformation.

Features

1. Launch and facilitate SAFe implementation roadmap
2. Deliver SAFe training across roles and teams
3. Lead PI Planning to align strategy and execution
4. Establish agile release trains with clear governance
5. Coordinate dependencies across teams and value streams
6. Define roles and responsibilities within SAFe structure
7. Embed agile metrics to track delivery outcomes
8. Align team backlogs with portfolio objectives
9. Support Lean Portfolio Management practices
10. Enable continuous improvement through Inspect & Adapt cycles

Benefits

1. Deliver strategic alignment across agile teams and portfolios
2. Enable faster, coordinated delivery at enterprise scale
3. Improve visibility through agile performance metrics
4. Define clear roles within the SAFe framework
5. Align team efforts to business and customer value
6. Reduce delays through dependency and risk management
7. Support consistent planning with PI cadence and rituals
8. Strengthen governance through Lean Portfolio Management
9. Enhance transparency across teams and leadership layers
10. Drive sustainable agile transformation at scale

Agile Adoption

Agile Adoption services from Agile Project Delivery help organisations transition from traditional delivery models to agile ways of working. We implement agile frameworks, train teams, and embed new behaviours through structured change programmes and coaching. Our approach blends delivery support with agile metrics and continuous improvement. The result is faster delivery, greater team alignment, and improved responsiveness to change.

Features

1. Assess organisational readiness for agile adoption
2. Design tailored agile adoption and rollout plans
3. Train teams in agile frameworks and practices
4. Embed Scrum and Kanban across delivery functions
5. Support leadership with agile mindset development
6. Facilitate cross-team alignment and agile ceremonies
7. Introduce agile metrics to track performance trends
8. Guide teams through backlog management and prioritisation
9. Enable continuous improvement through feedback loops
10. Align agile delivery to business goals and outcomes

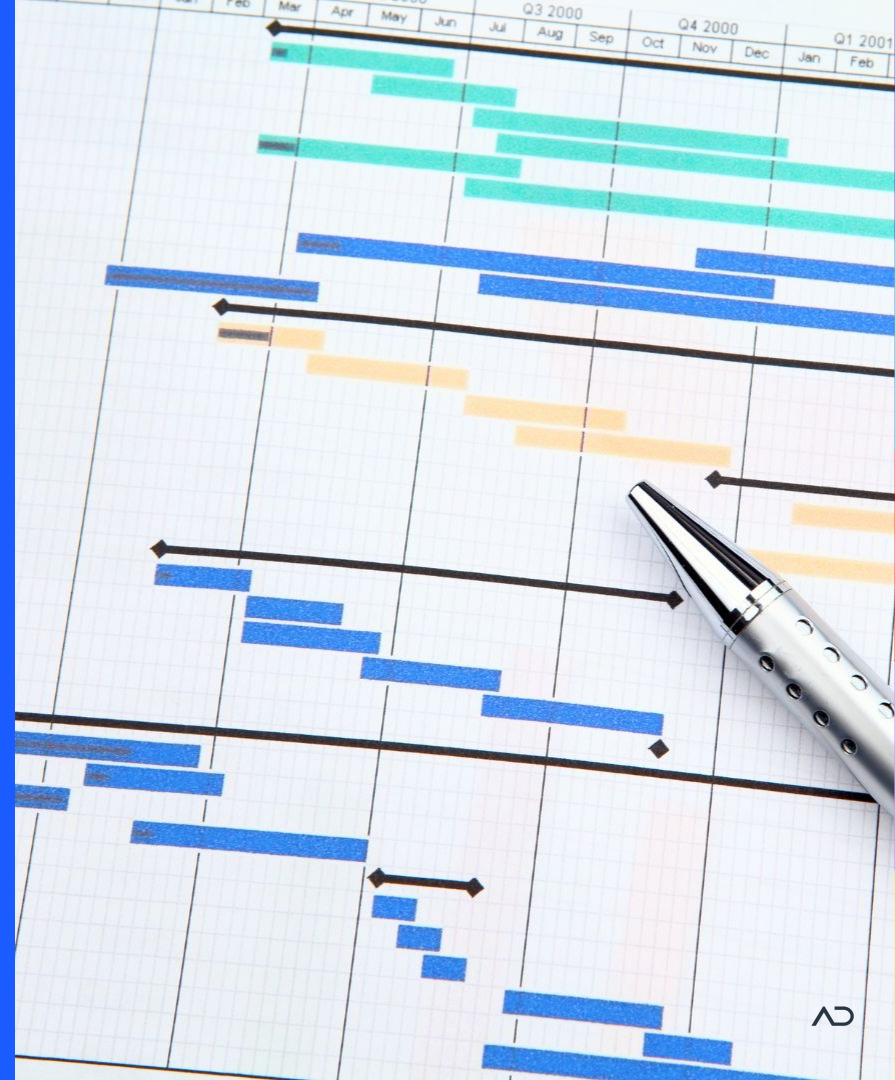

Benefits

1. Deliver faster outcomes through iterative delivery cycles
2. Enable teams to respond quickly to change
3. Improve collaboration across functions and disciplines
4. Define clear roles and agile responsibilities
5. Increase visibility through agile reporting and metrics
6. Support cultural change with structured agile practices
7. Align delivery with customer and business needs
8. Reduce delivery risk through incremental development
9. Enhance team performance through continuous improvement
10. Strengthen governance with agile planning frameworks

Case Studies

Agile Delivery

On Message, On Time: Transforming Agency Collaboration with Integrated Project Management

Rolled out PlanView Clarizen with SAP/Salesforce CPQ integrations across Multinational Advertising Company.

Problem

This company needed a single, scalable time and project management solution that seamlessly integrated with SAP and Salesforce CPQ. Existing processes lacked efficiency and oversight, demanding leadership to unify finance, billing, and portfolio operations.

Approach

I spearheaded the end-to-end delivery of PlanView Clarizen across 100 agencies, integrating SAP and Salesforce CPQ. Leading 80 people in seven teams, I combined Agile, Scrum, and Waterfall to ensure efficient delivery, risk mitigation, and user adoption.

Impact

Achieved measurable operational gains and cost savings by unifying project tracking, billing, and resource management. Embedded risk management in JIRA, coached two new project managers, and introduced agile best practices for lasting programme success.

Behind the Screens: De-Risking a Windows 10 Refresh for a Global Ad Group

Client-side leadership of a compliance-driven Windows 10 and hardware refresh across 3,000 devices, 30+ creative agency sites and multiple vendors

Problem

Microsoft ending Windows 7 support left a major ad group exposed: 3,000 ageing PCs across 30+ sites, messy asset data, mixed Windows/Mac estate and a sale where unsupported devices could undermine valuation and delay completion.

Approach

I led client-side delivery, brokering an outsourcing deal with Dell, aligning IBM on standard builds, and coordinating engagement managers, engineers and site leads to migrate data, refresh hardware and deploy Windows 10 across 30+ locations.

Impact

Within six months we upgraded or replaced 3,000 PCs, cut OS incidents by over 90% and lifted satisfaction by 8%+, leaving buyers with a fully supported, secure desktop estate and removing a compliance risk from the transaction.

Agile Project Delivery's Methodology

Agile Delivery

DELIVERY METHODOLOGY

High-level vision, objectives, and feasibility.

Transforms strategic intent into a structured project.

Execution using the appropriate delivery methods when the groundwork has been laid.

To ensure alignment for larger initiatives with multiple teams.

Make *transformation* **deliver**

Social Values

Agile Delivery

We Build Community

Because meaningful engagement, shared knowledge, and accessible education shapes everything we do.

We Believe in the Power of Dialogue

Over the past five years, we've **hosted 16 Socratic Dialogues**—full-day explorations of essential human questions like **freedom, happiness, leadership, and responsibility**. Through these thoughtful conversations, we **enhance awareness**, cultivate **active listening** and **confident speaking**, and **inspire greater social engagement**.

We Champion Knowledge Sharing

In 2025 alone, we've **delivered three interactive sessions**: an overview of Agile and Scrum, a practical walkthrough of Jira, and foundational best practices for psychological safety in workshops. Together, these sessions have **empowered over 120 people**—making knowledge accessible, practical, and impactful.

We're Making Accessible Upskilling Accessible

In the past year, we've developed **five online courses**—covering PRINCE2, Agile and Scrum, Scaled Agile, mastering Jira, and successful facilitation skills. Designed to open doors into project and delivery roles, these courses have already **helped 45 people** build their careers in 2025 alone.
