

AI & Automation Service Design

Service Definition Document

Introducing

Robiquity

About Robiquity

- **Established:** 2016
- **Specialist:** automation, low code and AI specialist services provider
- **Technology:** Microsoft Power Platform, Blue Prism, UiPath
- **Secure:** 80% of staff hold NPPV3 + SC clearances
- **Approach - Rethink, Reimagine and Redesign:**
 - Co-innovation partnership
 - Discovery & design
 - Rapid prototyping
 - Agile development - scale and embed what works
 - Up-skill and knowledge transfer – citizen development and pro-development

Robiquity Service Catalogue

End-to-End Service Support to Maximise Your ROI

Design Thinking

Service design enhances user experience and efficiency by employing a holistic, co-creative approach to innovate and streamline services, ensuring they are user-centred, effective and seamlessly integrated.

Intelligent Automation

Intelligent automation streamlines complex processes, boosts efficiency and enhances decision-making by integrating artificial intelligence into everyday operations.

Low-Code Solutions

Low-code solutions accelerate digital transformation by delivering solutions faster and cheaper through rapid application development.

Data and Analytics

Data and analytics capabilities unlock actionable insights, drive strategic decision-making and foster a culture of informed decision making through the deep analysis of trends and performance metrics.

Artificial Intelligence

Our AI Services integrate cutting-edge artificial intelligence to enhance your operations, revolutionise your capabilities, boost your creativity and drive outcomes.

Managed Services

Managed service capabilities provide organisations with operational reliability, strategic IT support and continuous optimisation, allowing you to focus on core functions while experts manage your technological infrastructure.

Alignment with Public Sector Priorities

AMBITION	CASHABLE SAVINGS/ COST AVOIDANCE	EFFICIENCIES/ PRODUCTIVITY	IMPROVED EXPERIENCE	REGULATORY AND COMPLIANCE	INTERNAL SKILLS DEVELOPMENT
HOW?	- Deliver items on IT roadmap faster and cheaper - Replace expensive third-party licensed systems	Refocus human time on higher-value, cognitive work	- Remove administrative burden - Reimagine fragmented processes - Digitise experiences and promote better services	- Standardise processes - Create clear audit trails - Improve adherence to SLAs - Real-time monitoring and alerts	- Knowledge transfer via blended teams - Dedicated training - Hackathons
ROBIQUITY PROOF POINTS	Through scaling low code, automation and AI, Robiquity helped a client achieve £8m cashable annual benefits and an 8:1 return on the Microsoft Power Platform.	Robiquity established a client's CoE delivering c.30 processes reimaged in the space of 12 months driving 85 FTE equivalent/cost avoidance benefit.	"I believe now I have my work life balance back. I would not want to have to go back to old ways of working."	Robiquity brought a police force's average disclosure time down from 64 days to an average of 17 days, (well within the applicable 28-day SLA).	Established client's CoE and up-skilled (via competency frameworks, knowledge transfer, tailored training) our client's internal team (BAs and Developers) to build self-sufficiency.

AI & Automation

Service Design

AI & Automation Service Design

DESCRIPTION

Robiquity provides AI and automation service design services to help organisations understand user needs and design effective, future-ready digital services.

Our approach combines analysis, user research, process mapping and technology evaluation to deliver actionable recommendations and service blueprints for AI and automation initiatives.

FEATURES

Discovery Workshops: engage stakeholders to understand strategy, challenges and opportunities.

Process Mapping & Analysis: review existing workflows, recommend optimisation opportunities.

User Research & Experience Design: understand end-user needs/accessibility requirements.

Technology Assessment: evaluate best fit low-code, automation, AI platforms.

Service Blueprinting: create service designs including workflows, integrations, operating models.

Cost & Benefits Analysis: identify cashable savings, efficiencies and ROI.

Rapid Proof of Concept: develop prototypes to validate concepts.

Governance & CoE: guidance on governance, compliance and adoption.

BENEFITS

- Understand business problems and opportunities before investment.
- Reduce risk by validating service concepts and technology choices.
- Identify efficiency improvements, automation opportunities and cashable savings.
- Improve user satisfaction and accessibility through user-centred service design.
- Enable faster adoption of low-code, RPA, AI and intelligent automation initiatives.
- Provide a clear roadmap and actionable recommendations for digital transformation.
