1.0 Service Pricing:

1.1 Service Price Detail

Scout® and Datahunter™ have two pricing models available:

- Price per activity
- Unlimited activity per user per year (no automation and fair usage agreement on standard data sources is required)
- Hybrid approach based on user licences and data searches / activities

All prices are per annum activities which can be purchased in bundles. Fair usage applies for data storage and unlimited activity bundles. The per activity model requires minimum activity bundles. Volume discounts may be available for certain standard data types and datahub.

The data available will depend on the relevant use case, compliance and commercial restrictions.

Data integrations are available for other data sources and price is based on SIFA rates for the time and skill required to integrate a data source that is not yet available through Scout® or Datahunter™

1.2 Service Pricing for Scout® and Datahunter™

Price Per Activity Model	Activities	List Price
