Faster progress through technology

Cloud & AI Implementation Planning & Design

Clarity, direction, and real-world impact

Who we are

We partner with ambitious leaders to cut through digital complexity and accelerate the UK's security, resilience and prosperity. Our teams design and integrate solutions that fit seamlessly into existing systems, turning strategy into measurable progress.

We blend strategy, technology, and change expertise to tackle complex challenges. Our specialists deliver actionable plans, robust architectures, and sustainable transformation across digital strategy, AI, and data governance.

Defence, government, and industry leaders trust us to deliver results that matter.

Our three principles

These principles guide what we do and how we work:

Force for Good

We empower our team, clients, and society by investing in people, supporting positive change, and championing national resilience and prosperity.

Deliver Excellence

We set the highest standards in everything we do. We think long-term, focus on what matters, and enable our team to deliver outstanding results for ambitious clients.

Empathy & Integrity

We listen to understand, challenge constructively, and always act with honesty and care, owning our decisions and doing what's right, even when it's hard.

Cloud & AI Implementation Planning & Design

We prepare delivery by translating strategy into implementable designs and plans. We define architecture direction, backlog structure, non-functional requirements and acceptance criteria.

We also plan mobilisation and environment readiness, so teams and suppliers can start delivery with fewer unknowns.

Features

- Architecture enablement translating strategy into implementable technical direction.
- Delivery mobilisation plan across people, process, tooling and environments.
- Acceptance criteria, non-functional requirements and service measures defined.
- Delivery plan with milestones, dependencies and resourcing assumptions.

Benefits

- Faster start through clear plans and ready environments.
- Reduced mobilisation risk through explicit dependencies and responsibilities.
- Better build quality through clearer requirements and acceptance criteria.
- Improved assurance outcomes through embedded security and compliance needs.
