
Jumping Rivers are renowned experts in data science and machine learning. We work with organisations around the world, and assist them in moving to a data-first approach. With a depth of experience across multiple industries, we can aid with challenges faced when delivering and developing data science and machine learning services.

Shiny for developing dashboards and interactive apps is widely used in the Government in more and more complex ways. This service will review your existing Shiny apps and make recommendations to improve it's value, whether that be through better code or better consideration of UI / UX

We believe that all our engagements should involve knowledge transfer to your team. During a project, we share our project handbook that details how time is spent and documentation. We can also provide training courses on any of the technologies or methods in use, including one-to-one support throughout a project.

Features

- Experts in building production Shiny Apps
- Advice on how your Shiny app could be better
- Recommend further use of products like Connect
- UI / UX capability to enhance usability
- Review the code to suggest improvements
- Productionise Shiny Apps for larger usage
