
Jumping Rivers are renowned experts in data science and machine learning. We work with organisations around the world, and assist them in moving to a data-first approach. With a depth of experience across multiple industries, we can aid with challenges faced when delivering and developing data science and machine learning services.

We are experts in statistical, M/L and AI modelling using leading edge techniques. We build models for a wide range of applications and we also review existing models to offer advice on accuracy, efficiency, applicability and bias. We also offer advanced training in this subject.

We believe that all our engagements should involve knowledge transfer to your team. During a project, we share our project handbook that details how time is spent and documentation. We can also provide training courses on any of the technologies or methods in use, including one-to-one support throughout a project.

Features

- Experience in cutting edge data science; over 100 papers
- Flexibility: a wide range of knowledge available
- Solutions built to match your skills and infrastructure
- Experience in public, private, and academic sectors
- Machine Learning solutions with R and Python
- Services; training, design and implementation of machine learning models
- Expert knowledge in statistics, machine learning, and AI
- One-to-one mentoring and training
- R, Python, SAS, Excel Model Validation and Assurance

Benefits

- Rapidly upskill your data science team
- Augment your team as needed
- Move from development to production in organised and reproducible environment
- Reduce time to deployment
- Reduce friction when moving from desktop to cloud
- Sanity check your models
- Access to Data Engineers, Data Scientists, Data Architects and more
