

Explore our range of specialised training courses designed to equip your data science team with essential tools. Our courses enable rapid capability building and upskilling in data science and analytics for your organisation.

For teams seeking tailored agendas or custom courses utilising specific data challenges, we offer bespoke training solutions.

We tailor our training materials to align with your unique workflows and industry context, drawing from our extensive experience in R and Python across academia, government, and commercial sectors.

Upon completion of our training, participants will achieve outcomes such as adopting reproducible workflows with industry best practices. Additionally, experienced consultants are available to provide further assistance and mentoring for effective knowledge transfer to individuals or teams.

Our specialist bespoke training allows customization of existing courses to match your organization's tools, knowledge, and data. For instance, we have adapted popular courses like "Intro to R" and "Programming in R" using real examples from client bioinformatics data.

All our courses are available online or in-person, with on-site delivery options available. We provide all necessary resources, including laptops and cloud infrastructure, ensuring a seamless learning experience even in environments with software installation restrictions.

Features

- We meet your users to design the course to meet their needs
- Training for full teams or 1-on-1
- Can be used to provide ongoing support throughout a project
- Direct contact with a Data Science consultant
- Work within your own environment, use your own systems
- Remote training environments available on cloud-based software if required
- Can build on our pre-packaged courses teaching core concepts
- Create brand new courses using your own modelling techniques and tools
- Tailored to meet your budget
- Flexibility to adjust pace on a week-by-week basis to follow your own progress

Benefits

- Develop understanding using your own data with no need to 'translate'
- Teaches individuals to question and grow confidence, ready for new and unknown tasks
- The ability to ask niche questions and receive quick answers

- Familiar setting with your own environment and workflow
- Personalised sessions help attendees feel at ease
- Opportunity to ask questions related to your active projects
- An insight into the methodical approach undertaken during a Data Science project
- Learn using your own data and projects to apply knowledge immediately
- Develop your own guidance and usage documentation as you go with assistance
- Ensures users are learning core concepts not just the example task

Constraints

- Customisation scope may be limited by core training concepts.
- Consultant availability for direct contact and ongoing support may vary.
- Extensive customisations may impact budget and require additional consultation.
