IMPROVED PATIENT SAFETY STARTS WITH A SCAN.

CareScan enhances surgical safety and patient results by offering easy data recording during care, allowing clinicians to concentrate on patient care in dynamic operating theatres. It consolidates clinical and operational knowledge into a functional workflow and gathers comprehensive evidence on patients and medical supplies, aiding doctors and administrators facing inefficient resource allocation.

Couple this with the knowledge that CareScan comes with full-ongoing support via our support team, ongoing developments with new features through regular updates and has been developed by NHS, for the NHS with input from people like you – those with the best and most relevant expertise possible, who knows the system, the pressures and the pinch-points.

CareScan Point of Care
