Solution Features**Red Alert**

Used any time a user feels their personal safety is compromised. Opens a 1-way voice call with the Monitoring Centre where an operator will monitor the situation and quickly escalate as necessary.

24/7 SoloProtect Monitoring

Dedicated full-service monitoring and response team, who can quickly dispatch emergency services to a device or app user's location (if needed). Staffed with highly trained operators, who are available 24/7- 365 days a year.

Check-In

Allows a user to leave a 20 second voice message including details of their location and activity to inform any subsequent alerts.

Device Check

Performing a Device Check will show the user their battery life, signal strength and geolocation accuracy at a glance.

Incapacitation Alarm

When a user enables this function, a Timer is initiated during which the device will monitor for a fall and non-movement. If the device determines that the user has become incapacitated, it will automatically raise an Incapacitation Alert and contact our Monitoring Centre.

Ready2Talk ®

When initiated, this feature triggers a live 2-way voice call to the Monitoring Centre where a highly trained operator can accompany the user in a non-alert situation.

Monitoring Timer

The Monitoring Timer feature provides comprehensive worker protection and peace of mind in low or no-signal areas.

Rip Pin Protection

When the Rip Pin is activated on the ID Touch, a Red Alert will be raised automatically if the Rip Pin is removed by force.

Wi-Fi Calling

Allows calls to be made via a Wi-Fi connection, rather than via traditional cellular networks (available on touchscreen devices).

Insights Features**Last Known Location**

Monitor the last known location of your mobile workforce to track the progress of work, redeploy workers to where they're needed, and identify efficiencies.

Group Management

Customers who have a large number of device or app users can use this feature to divide users into groups. This can replicate your organisational structure for easy management. The Account Administrator can then delegate management responsibilities to Group Managers, who can manage individual and multiple groups.

My Analytics

An Insights user can view their device or app's activity including their last known location, Check-Ins, Red Alerts, low signal notifications, as well as Ready2Talk and Incapacitation events.

Latest Activity

Account Administrators/Group Managers can view the latest events from the devices or apps in their account or group.

Usage Analytics

Account Administrators/Group Managers can view various reports and information regarding device and app usage in their account.

User and Training Analytics

Account Administrators/Group Managers can view device/app activation analytics and see which users require training.

Alarm Data

Account Administrators/Group Managers can view the latest analytics on the Alerts that have been raised within their account or group.

Automated Reports

For each analytics report type, an Account Administrator can schedule a dispatch to a list of recipients on a regular basis.

Export Reports and Data

Account Administrators/Group Managers can export the data from their account in an Excel or CSV format.
