Platform Management

Service Description

The ACS managed support service provides incident management, day-to-day BAU monitoring services, 24 hours and 7 days of service monitoring and technical support services for managing application and business process.

Our specialisation includes:

- Managing and administrating legacy Oracle & Microsoft Database servers to maintain high security and availability
- Managing and administrating ERP solutions with full application support
- Test services (manual or automation), Change and Release Management processes
- Robotic Process Automation (RPA) for retaining legacy process and reducing manual intervention

Generative AI and Agentic AI implementation

Service Description

Our AI Squad service accelerates AI delivery by combining agentic AI systems with human strategic oversight. Autonomous, goal-oriented agents collaborate, adapt, and learn across workflows, reducing delivery cycles by 40–60%, scaling expertise enterprise-wide, enabling 24/7 development, and ensuring continuous governance, quality, and ethical compliance.

Our Service includes:
