

Archibus Enterprise Pricing

Pricing Model

Archibus is priced on a term-based licensing model. Applications required to meet a client's desired system functionality are licensed separately from user licenses; as such, costs per application are not impacted by system use, allowing for easier system scalability. The licence model for the software is a hosted term (platform-as-a-service, or PaaS), whereby there is an annual subscription, payable in advance, for the required number of concurrent users. Where required, Archibus can also be deployed as an on-premise solution to satisfy closed environment requirements. There is a minimum subscription period of three years. The PaaS annual subscription includes the software licence, maintenance and support and the Cloud Service. The Cloud Service included is for two environments (production and staging) and 200GB disk space each. The pricing model consists of a one-off set-up cost, followed by an annual Service Fee.

Software Pricing

Software prices are annual and are dependent on the specific modules needed to meet your requirements. Prices range from £57,000 – £500,000 p/a which includes hosting and support as detailed above. Typically, there is significant price advantages for buying multiple modules to support multiple operational domains at a single time to avail both software discounts and savings of running a single implementation as opposed to implementing over multiple stages. Additional environments are at the client's discretion but are not required for deployment. Additional environments are available for £650 per additional environment per month (e.g. acceptance, training) plus 12.5% of overall software license value per environment. Extra disk space is also available for £300 per 1TB per month. Additional hosting options for heightened availability and security are available and priced on request.

User Pricing

There are two main types of user licence: Power Users and Request Users. Request User licences are designed for the self-service user who needs to access the system to request services e.g. raise maintenance tickets, request a move, and view their request status and information to stay informed. Power Users are those users who need to enter data into the system, manage approvals and workflows and run reports. Both user types are licensed concurrently.

Power user licenses can be purchased in bundled quantities (which can be combined to reach the desired total quantity) from 10 – 250 concurrent users which cost from £3,000 - £70,000 per bundle p/a [approximately £200-£300 per user p/a]

Request user licenses can be purchased in a range of quantities can be purchased in bundled quantities (which can be combined to reach the desired total quantity) from 25 – 250 concurrent users which cost from £950 - £8,000 p/a [approximately £20-£30 per user p/a]
