

Lot3: Cloud Support

We Make Brilliant Technology That Makes Your Organisation Succeed!

The skill and resources to deliver Integrated, innovative, new and appropriate technologies that drive efficiency and scale your organisational operations.

OUR SERVICES

Add Scale with Tech Teams

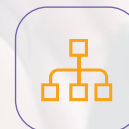

We build core teams for established enterprises, growing technology companies and startups. With our support, your velocity and scalability will dramatically improve your speed to market and reduce costs.

Design, Develop & Deploy

Managing digital projects doesn't have to be hard. You need the right tools and the right approach, and that's where we come in.

We partner with you to design, develop and deploy top-tier software development, turning great ideas into reality that delivers value.

Enterprise Platforms

Our enterprise platforms are designed to help you harness the power of APIs and stay ahead of the curve. We'll work with you to modernise your legacy systems, so you can keep up with the competition and provide an exceptional customer experience.

Cloud Engineering

Best path forward for your business and make sure your applications are up and running as quickly as possible. We'll help you address operational and organisational changes, reduce risk and cost, and make sure your deployments are always secure.

Our services continued...

Digital Experiences

We put ourselves in your customers' shoes so we can understand what improvements will have the biggest impact on your ability to engage your clients and run a Digital Focussed Business. In addition to developing native apps, we can build mobile, web and IoT frontends as well as APIs/SDKs that integrate directly into the platforms powering those channels.

Cloud Integration & Migration

- Cloud Development & Integration ensuring clients get their cloud transformation right the first time.
- Cloud Engineering services to integrate technology seamlessly into the day-to-day business.
- Cloud Migration strategies to help navigate through challenges such as re-hosting and re-platforming.

Modern Engineering Techniques

- Build Cloud enabled, data-driven business that's equipped to use AI in new ways for new growth.
- Measure value potential, aligning on business priorities and developing a data strategy that can be articulated across the organisation.
- Build a cross-functional data platform on cloud that connects the enterprise through a secure, single source of truth.

Platforms Minimised for Operations

- Systems developed to be available, maintainable & scalable.
- Mix of Automation and service partnerships at the right levels.
- Optimised service operations to minimise headcount for Business & IT Operations.

Change Management Process

Many businesses try to go it alone during their digital transformation, but this is often unsuccessful and can lead to frustration and wasted time and money. Our team of highly skilled and experienced professionals, establish a clear road map for your transformation and quickly unlock the value of digital technologies.

Technology Consulting

- Exploit latest technologies and modern architectures as critical enablers of business growth.
- Modular architecture implementations with Domain Driven Design principles.
- Microservices platforms everywhere using API first methodology.

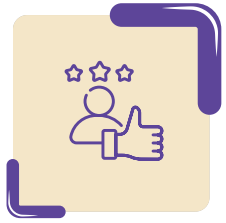

Data Driven Enterprise

- Services developed to be 12 Factor compliant.
- Ephemeral environments for Route-to-live.
- Everything is Code, from Infrastructure to Ops procedures and will follow similar engineering lifecycle.
- Low-code techniques without compromising on engineering lifecycle.

Digital Business Transformation

- Help clients with digital organisation enablement by defining business transformation case through digital reinvention
- Establish transformation road map by identifying the technologies, skills, talent, and cultural changes
- Quickly unlock the value proposition, we partner with our clients in developing integration and technology strategy, rapid prototyping & testing.

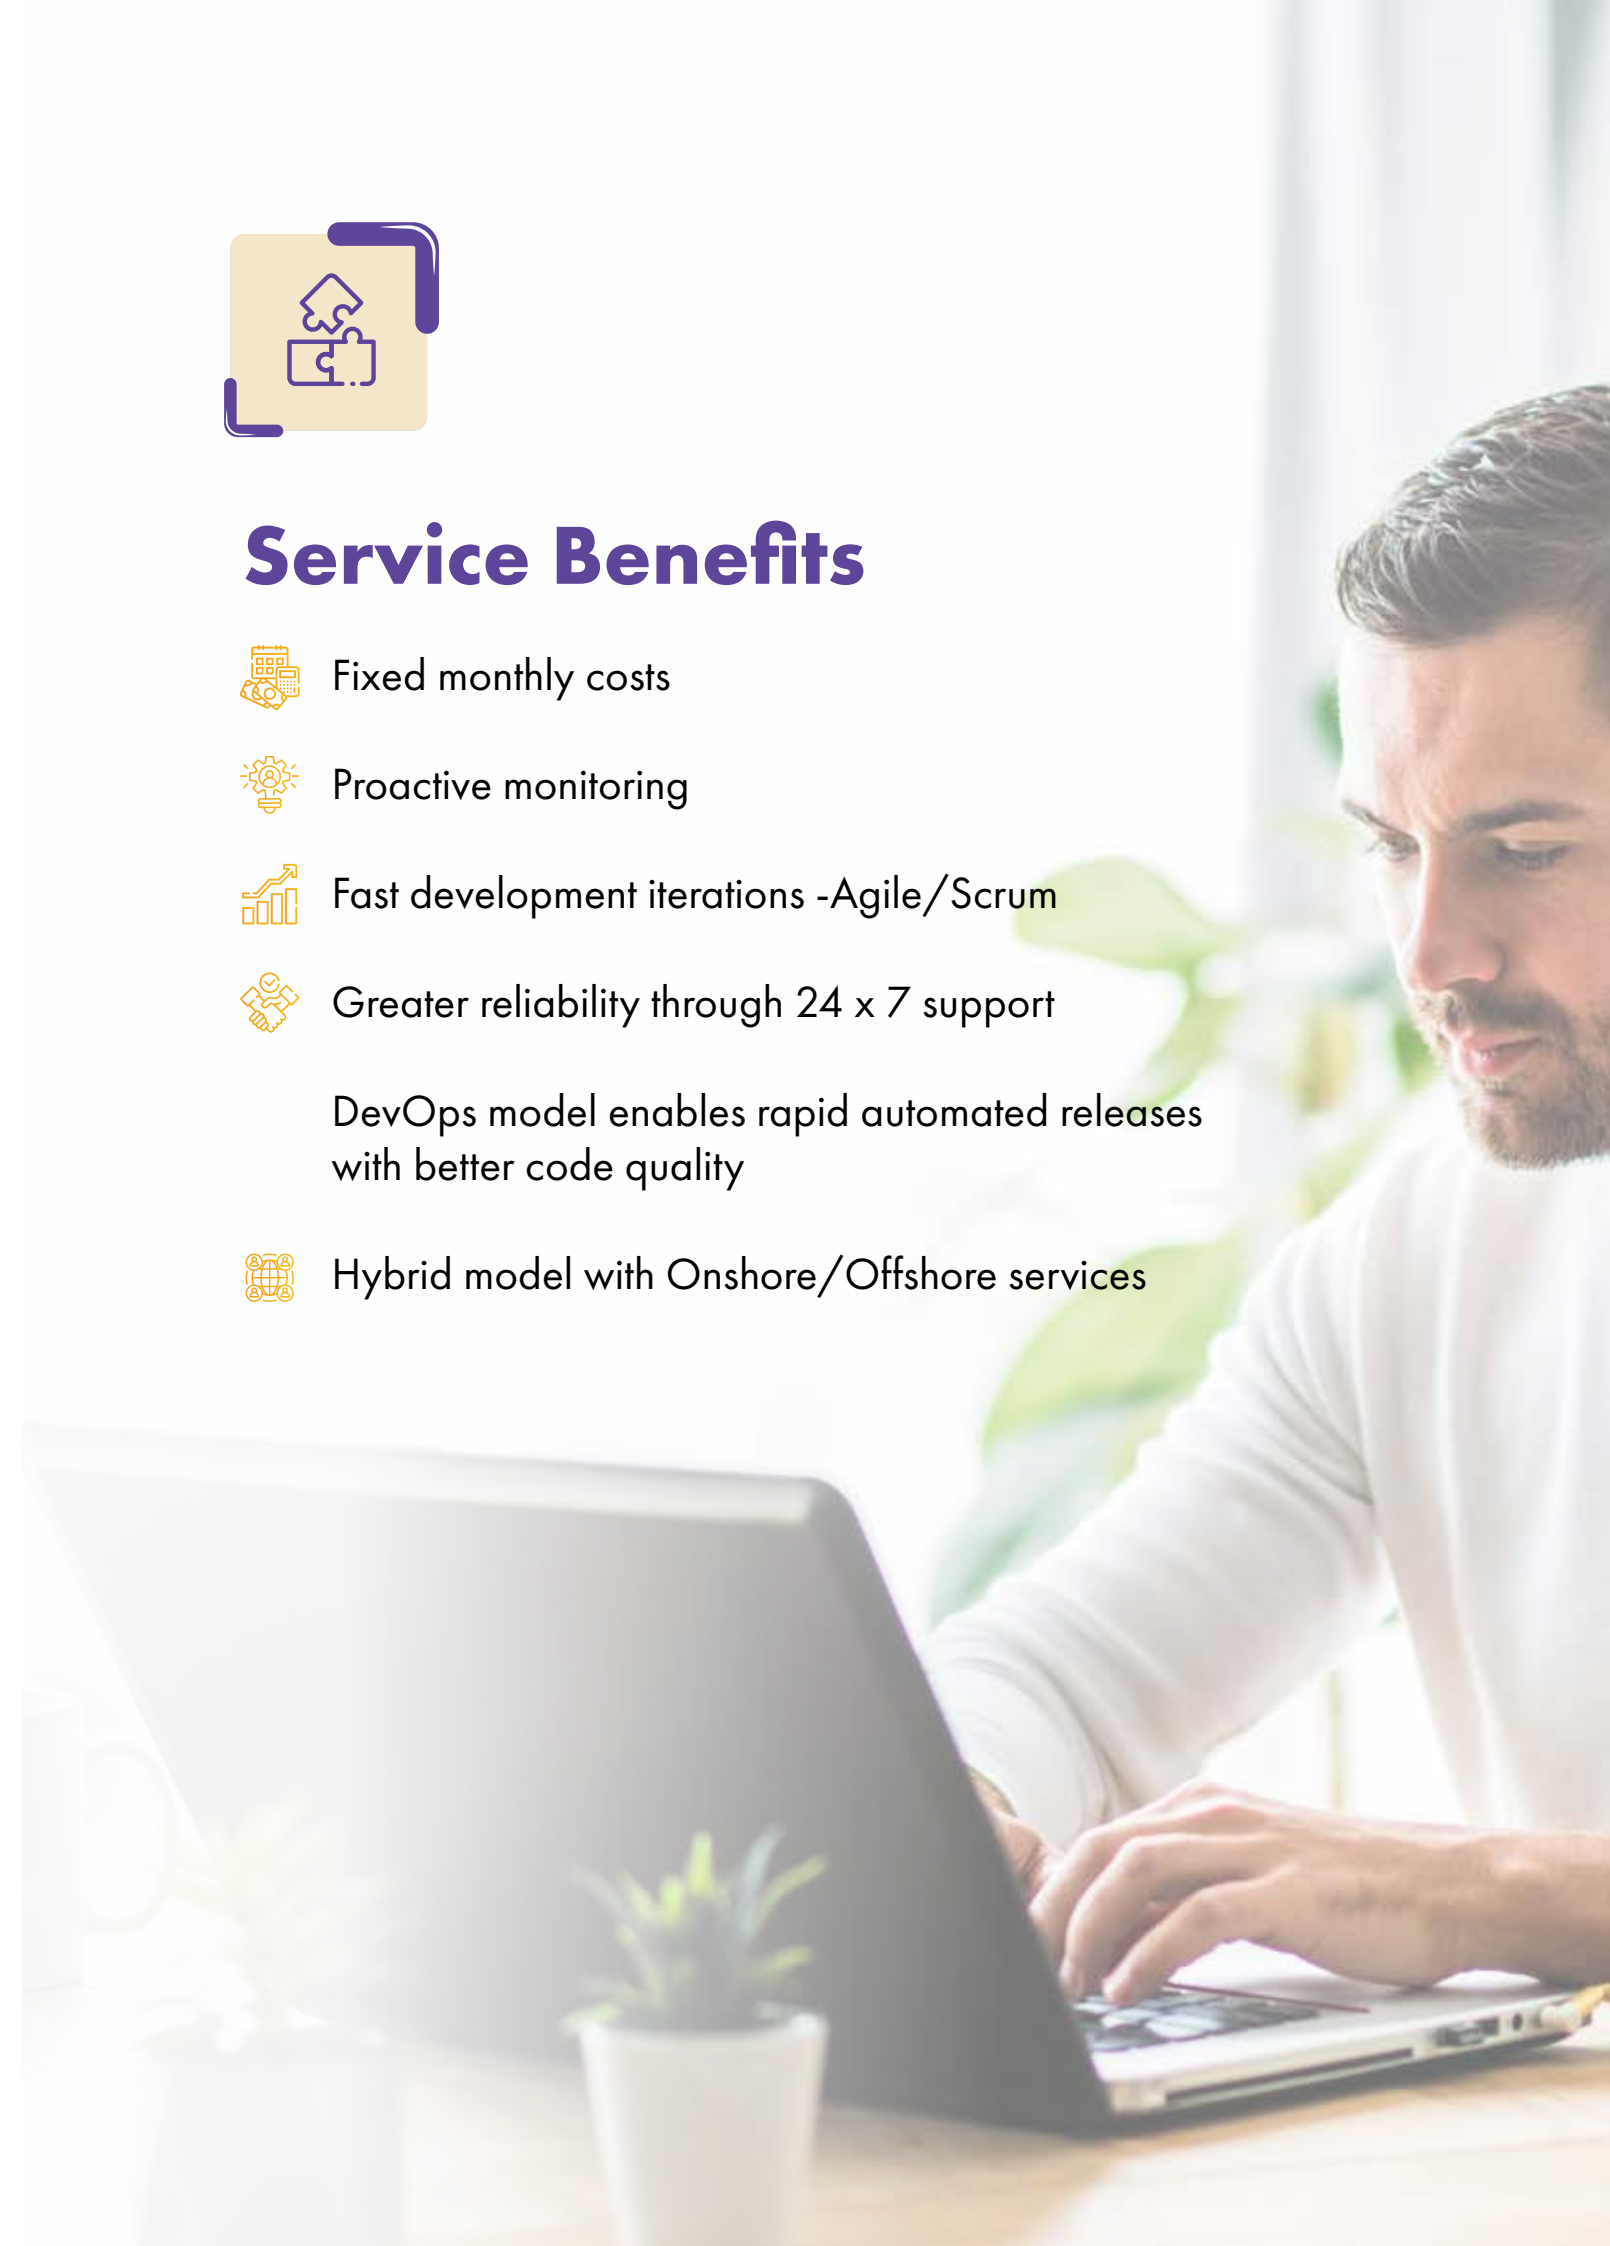

Service Features

-  Business analysis, solution design, development and configuration
-  DevOps, CI/CD, AWS/MS Azure
-  Security -AWS/MS Azure
-  24 x 7 support of critical business applications
-  Support for major cloud services, AWS, MS Azure
-  Incident/Change management process
-  Agile development methodology and Sprint implementation
-  Cloud application implementation

Service Benefits

-  Fixed monthly costs
-  Proactive monitoring
-  Fast development iterations -Agile/Scrum
-  Greater reliability through 24 x 7 support
- DevOps model enables rapid automated releases with better code quality
-  Hybrid model with Onshore/Offshore services
