

a simple compliance solution

welcome to
L8guard

L8guard greatly reduces the administration overheads of processing low-use water outlet risk assessments whilst providing up-to-the minute statistical information and analysis.

By replacing paper based systems such as log-books, L8guard provides a proactive instant audit trail helping to ensure ACOP L8, HTM 04-01 and HSG 274 compliance.

The system is designed, hosted, supported and maintained by the team at Digital Missives Ltd.

about L8guard

L8guard is a web-based software system that enables you to fully manage the low-use water outlet flushing regimes across your entire estate.

By working with departmental contacts, the system automatically generates risk assessment forms and tracks responses through to completion, escalating when necessary and providing a fully closed-loop audit trail.

Users can easily complete the risk assessment form, either confirming that there are no low-use water outlets in their area or listing any outlets they have flushed. Faults or lack of access can be reported at the same time.

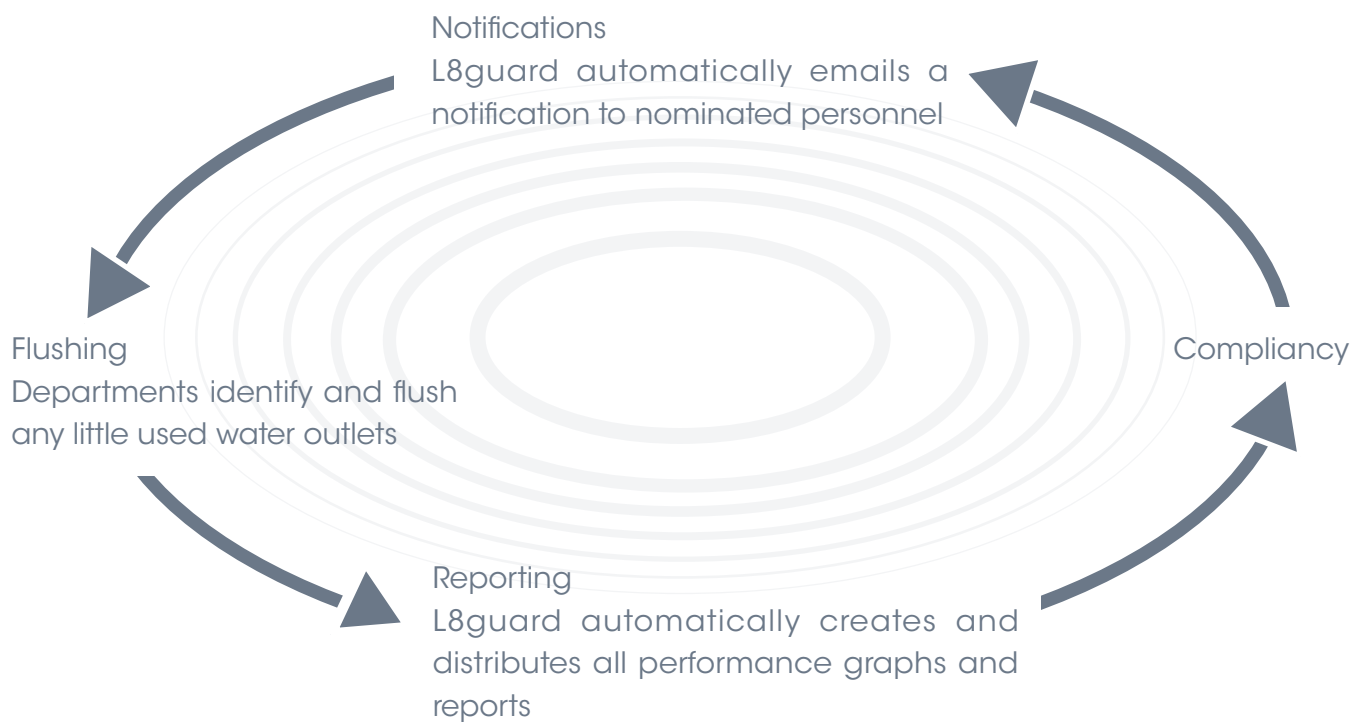

Existing users say it typically takes them under a minute to complete the assessment.

The implementation process is simple: no installation is required and we populate the system for you with all building, room and contact details. Once implementation is complete, our support team continues to manage the relationship between users and the system by telephone and email.

Administrators can access up to the minute compliance information via the central database and automatically receive daily, weekly and monthly performance reports.

how L8guard works

the L8guard solution

L8guard is used in a wide variety of environments and is suitable for the healthcare sector, education sector, public estates, commercial premises and sports facilities. It is fully scalable and can easily be configured to work within single premises or large, multi-site organisations.

Within hospitals, L8guard's optional daily flushing module helps protect against *pseudomonas aeruginosa* in augmented care areas by reducing stagnation and ensuring water treatments are drawn through the water system.

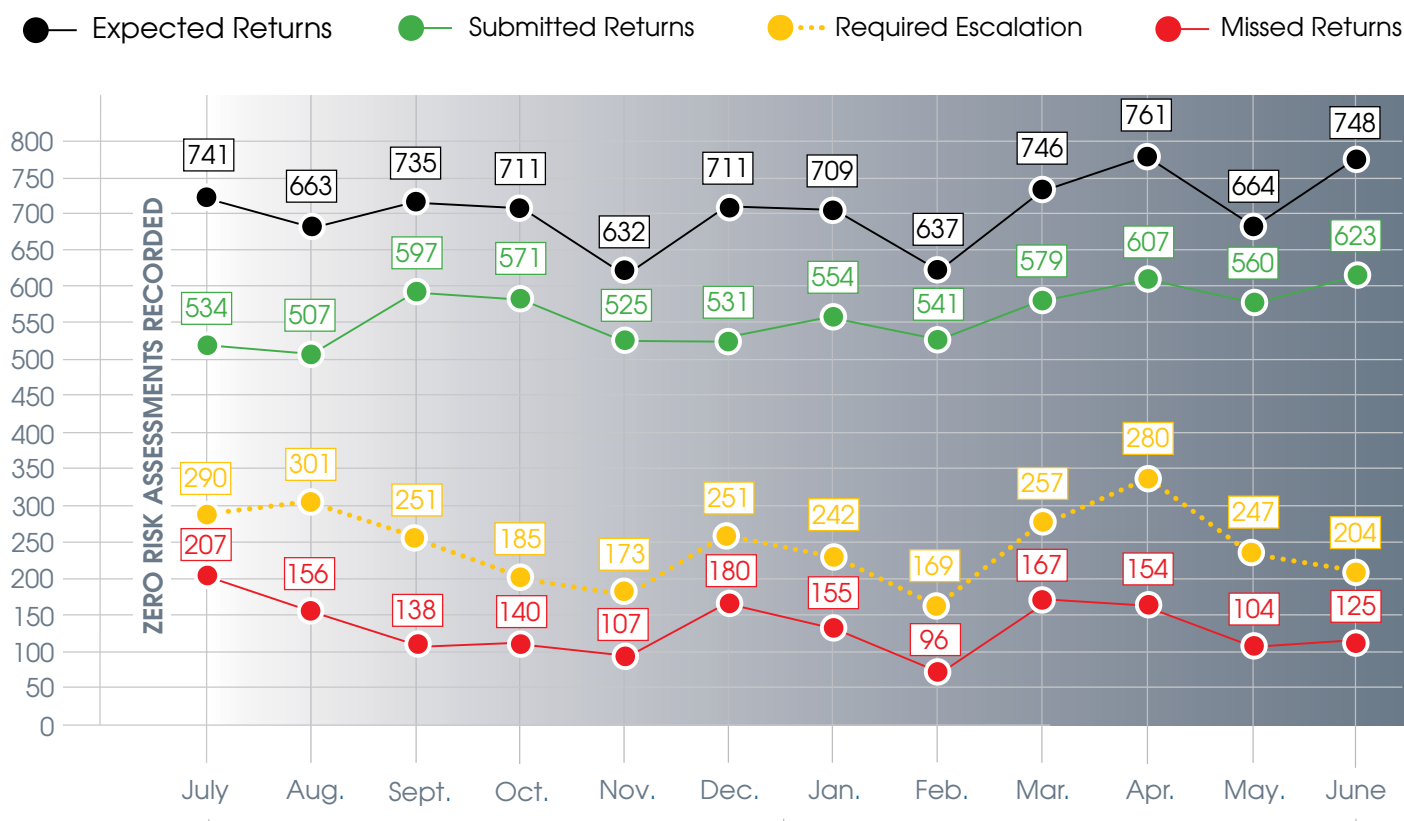

To help keep things simple, L8guard collects all your flushing results

in real-time providing an up-to-the-minute view of compliance. The system is supplied with over 30 predefined reports and charts, which are scheduled and distributed automatically and build into an extensive library, documenting compliance year after year.

The reports cover top-level strategic compliance information from across the whole organisation as well as providing detailed performance responses for specific areas.

'Super escalations' can be set up to help quickly identify non-compliant areas and all completed flushing notifications are stored on-line for future reference.

L8guard Performance Chart - Legionella Twice Weekly Flushing

Legionella Flushing - 12 Month Summary Report

Shows a percentage of returns submitted against the expected number (Returns Compliancy Index). The higher the value, the better the compliancy performance of the department in any given month.

the L8guard experience

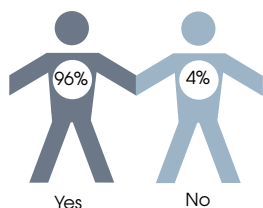

L8guard requires very little in the way of user training and is supplied with electronic manuals and on-line walk-through videos. Our support team is available both by telephone and email and manages the vast majority of information updates (such as change of department contacts) for you.

We also monitor our users' experience by means of an annual questionnaire, as shown below.

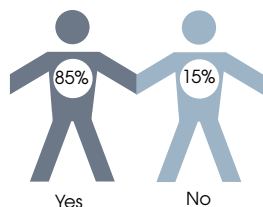

Q1. How long does it take you to complete and submit a risk assessment?

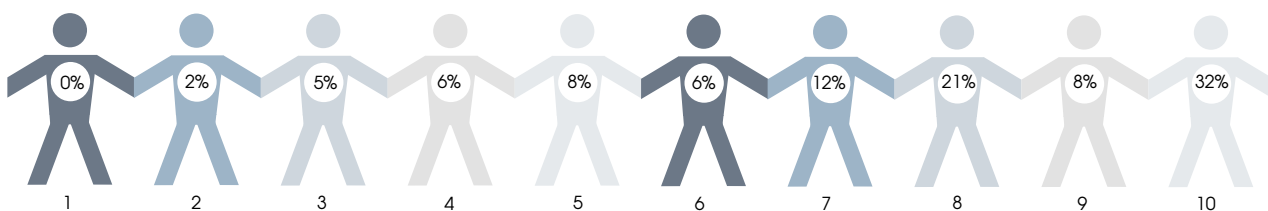

Q2. Do you find it easy to do?

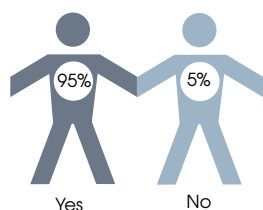

Q3. Is it easier than the previous way you did it?

Q4. From 1 to 10 (10 being the highest) how do you rate the risk assessment as a work priority?

Q5. Do you understand the benefit of doing this?

'It is extremely easy to use at the moment; don't change it'
