

Cloud Cyber Security Strategy, Solution Design and Implementation service

G-Cloud 15 service definition document

Cloud Cyber Security Strategy, Solution Design and Implementation service

Daintta enables organisations to define, design and implement cyber security strategies that protect data, systems and services while supporting organisational objectives.

The service delivers proportionate, risk-led security across architecture, identity and fraud, supporting implementation and continuous improvement as technology, threats and policy evolve.

About the Service

The Cloud Cyber Security Strategy, Solution Design and Implementation service enables organisations to define, design and deliver cyber security capabilities aligned to cloud adoption and organisational objectives.

The service applies a risk-led, outcome-focused approach, translating strategy into proportionate architectures, controls and delivery plans suitable for live environments, across cyber security, fraud prevention, and identity and access management.

Daintta works alongside senior leaders and delivery teams to integrate cyber security, identity, and fraud controls across enterprise architecture and operating models, ensuring alignment with regulatory and national standards.

This enables organisations to manage their risk confidently and continuously improve security posture without unnecessary cost or complexity.

Service Features

- Develop outcome-driven cyber security strategies aligned to organisational goals
- Translate strategy into implementable security architectures and designs
- Design proportionate security controls for cloud and hybrid environments
- Integrate identity and access management into enterprise security design
- Address insider threat, identity fraud and biometric security risks
- Design cyber fraud fusion approaches across platforms and channels
- Provide independent, vendor-agnostic security design and assurance
- Support secure implementation planning and delivery roadmaps
- Align security with regulatory, national and assurance frameworks
- Enable continuous improvement across strategy, design and implementation

Service Benefits

- Reduces cyber risk without unnecessary cost or complexity
- Improves alignment between security, business and technology strategies and priorities
- Strengthens identity, cyber and cyber-fraud fusion capabilities
- Accelerates delivery through early security integration
- Improves audit readiness and assurance confidence
- Enables informed, risk-based security investment decisions
- Supports sustainable in-house cyber security capability
- Transfer of cyber security knowledge into the organisation
- Deliver continuous improvement of strategies, policies and procedures
- Develop a risk-driven and innovative culture in the organisation

Service Description Details

Scope of our Services

Daintta helps public sector organisations successfully deliver complex cloud-enabled programs and transformations.

We support clients to move from early discovery through to live operation, ensuring delivery activity is aligned to strategic intent, operational readiness and measurable outcomes.

Our Approach

Our approach recognises the practical realities of public sector delivery, including complex stakeholder environments, multi-supplier ecosystems, assurance obligations, and evolving policy and technology contexts.

We work alongside client teams to provide experienced, impartial delivery leadership that enables progress while managing risk in a proportionate, transparent & controlled manner.

Customer Stories

Secure AI on Private Cloud

Designed, trialed and deployed a Generative AI capability into production for a central government department with in a secure private cloud environment. The solution integrated identity controls, governance and repeatable deployment patterns, enabling improved operational efficiency while maintaining security, assurance and responsible AI expectations.

Critical Resilient Infrastructure

Led the design, build and preparation for operation of a secure, resilient infrastructure spanning on-premise and cloud environments. Delivered systems engineering, secure architecture and software releases, maintaining alignment between design intent and live environments and enabling confident transition towards sustained operational use.

Digital Collaboration Platform

Enabled improved collaboration across a government department and its arm's-length bodies to develop shared data and digital products. Daintta supported delivery planning, governance and stakeholder alignment, reducing fragmentation and enabling confident, coordinated delivery across a complex multi-organisation ecosystem.
