Introduction

Evergreen Life offers a comprehensive digital health solution that promotes patient empowerment, improves healthcare outcomes, and contributes to a more sustainable healthcare system.

In this document you will find an introduction to all the types of charges that you may incur in consuming our service. This will identify any setting up costs, operating costs, service closure costs and any optional charges from services that may accompany our services such as consultancy and training.

Implementation and service configuration is flexible according to the needs to the service and population. Please contact us for a detailed proposal. All figures are provided exclusive of VAT.

Evergreen Life App

The Evergreen Life App lets people own their health information, driving informed healthcare and giving people the best chance of staying well. Users can add their own information not held in the GP record, including allergies, conditions, and medications, building a complete, accurate Personal Health Record (PHR) that they can share with anyone they wish. This data can be used to provide users with insights into their Healthy Life Expectancy (HLE).

Evergreen's proven, nationally deployed patient-owned record platform and its advanced AI layer are designed to improve clinician efficiency, enhance clinical coding accuracy, and simplify digital workflows; health organisations can utilise their populations PHR and HLE data to identify priority cohorts, stratify risk, and target interventions that support preventative care and system efficiency.

Evergreen Life also operates a Trusted Research Environment that allows approved organisations to access anonymised PHR data for research purposes. This dataset combines real-world clinical records with user-reported health and genetic information, suitable for observational studies, feasibility analyses, external control arms and outcomes research.

Service	Module	Licence Cost	Unit Type
Evergreen Life App	Application as installed on IOS or Android	The Evergreen Life App is free for anyone to download and use.	Per Patient
Evergreen Life PHR	Personal Health Record Data	£1.00	Per Patient
Healthy Life Expectancies	Population health analysis, reporting and dashboards	£1.00	Per Patient

askmyGP

askmyGP is an online consultation and workflow platform that enables GP practices to manage patient demand through operational change and digital triage. It makes it easier for patients to contact their own practice and helps practices prioritise and deliver high-quality care efficiently across their networks.

Patients submit their requests in their own words through a simple, secure interface. All queries are captured and triaged in a consistent way, enabling appropriate care navigation and fast, clinically led decision making. No patient is redirected until their case has been reviewed by the practice team, and triage and treatment decisions remain entirely within the practice based on clinical judgement and knowledge of the patient.

The model promotes rapid response times, with most patients receiving care the same day. Its simplicity drives uptake by patients and ensures parity, as all requests—regardless of channel—are prioritised according to clinical need. Patients can indicate preferences (e.g., clinician, communication method, timing), supporting continuity, personalised care, and high satisfaction.

askmyGP differs from other online consultation systems by:

- Managing all patient demand based on clinical priority,
- Keeping clinical decision making with trained NHS professionals,
- Allowing patients to describe problems in their own words without complex menus or questionnaires,
- Delivering care based on need rather than communication channel.

Service	Module	Licence Cost	Unit Type
askmyGP	All askmyGP modules and features.	£1.00	Per patient
askmyGP	Implementation Fees	£2700	Per site

Casper

Casper is an intelligent web-based system that uses logic to manage specialist clinical referrals dynamically in disciplines as diverse as oncology and endoscopy.

Casper can manage an entire Trust or Region, and our software has even been managing an entire nation's radiotherapy referrals since 2017. This results in faster referrals and reporting, less paperwork, more transparency and better governance.

Casper is a web-based application, written in PHP. It is accessed by the clinical team using a standard web browser, with no additional plugins or setup required.

Service	Module	Licence Cost	Unit Type
Casper	Casper Core Platform: • Core Outpatient Module • In-Patient • Reporting	£18,425 £2,860 £1,100	Per site
Casper	Additional Casper Services: • Additional Module • In-patient Module • Reporting • Additional Centre • Additional Unit • Satellite	£7,700 £2,860 £1,100 £7,700 £2,750 £2,750	Per site

	• Spine Connection • 50 User Licence • Additional Server Instance	£2,200 £1,650 £3,300	
Casper	Implementation Fees: • Spine Interface Configuration • Casper training, configuration & set up (40hrs)	£5,500 £4,125	Per site
Supplementary or related services	Additional Support (for all services) • Price per hour • 8-hour bundle • 16-hour Bundle • 40-hour Bundle	£137.50 £1,072.50 £2,090 £4,950	Annual cost per site
