Off-boarding

In line with G-Cloud guidelines, a standard priced off-boarding facility can be agreed at the outset. This covers a simple single tier export for meta-data, and another for documents. This would be a fixed cost of £9995

However, it is advised that a more sophisticated export is created to embody all data stored and into a format suitable for the recipient system. This can be priced at the time, and is using the prevailing rate card at that time. It may or may not be more than the fixed price shown above.

All prices require the addition of vat at the prevailing rate.
