Pricing Overview

COHESION solutions are designed to be configurable, flexible and scalable to meet customer localised needs during service and user setup. Organisation, service and user setup and configuration of dashboards, records and data components can all be completed through configuration tools within the solution management area by permissioned system administrators.

COHESION offers solutions with a System Setup followed by a Software-as-a-Service (SaaS) licence model which covers cloud hosting as well as support and maintenance costs. The information below gives indicative prices which can be tailored to meet Customer needs and requirements.

System Setup

System Setup typically involves setting up a working demonstrator system configured to local needs and requirements on a UK Azure Cloud for customer approval. This may also include co-design sessions, data modelling, and on-boarding requirements. System Setup ranges from £5,000 to £50,000 (ex.VAT) depending on customer requirements.

SAAS Licence

Software-as-a-Service (SaaS) licence model covers the provision of cloud-based hosting as well as on-going system support and maintenance costs. The licence model is tiered for volumes of users and includes discounted pricing ranging from £1.00 to £100.00 per user per month depending on customer needs and requirements. Further details are available on request.

Data Transaction

A Data Transaction is defined as a data packet transacted between two connected data sources and is charged at £0.05 per transaction when high-traffic volumes are specified.

System Add Ons

Costs of extended use case options can be provided on request for setting up New Use Cases, New Services, New Data Features/Modules and New Data APIs but typically follow a technical day rate of £800 per day (ex. VAT).

Consultancy Services

COHESION also offers a consultancy day rate for the provision of other services, relating to the Skills Framework for the Information Age, at £800 per day (ex. VAT).
