Aaseya Enterprise Portfolio Management (vCentral™)

1. Aaseya Enterprise Portfolio Management (vCentral™)- Pricing

Pricing for Aaseya Enterprise Portfolio Management (vCentral™) is designed to be flexible, transparent, and aligned with an organisation's portfolio scale, operational complexity, and functional requirements. The solution is delivered using a SaaS-based model, enabling predictable operating costs and supporting phased adoption across enterprise portfolio, programme, and resource management capabilities.

vCentral™ is provided to customers **at no additional licence cost** when engaged as part of an Aaseya delivery or managed service engagement. The **application framework is provided at no cost; only configuration is charged**, ensuring customers pay only for the services required to tailor the solution to their specific business needs.

The pricing model considers multiple factors, including the number and type of users, portfolio and programme size, enabled functional modules, data volumes, reporting requirements, and the complexity of integrations with existing enterprise systems. Organisations may adopt vCentral™ incrementally, starting with core portfolio management capabilities and extending functionality as business needs evolve.

Where customers require configuration, integrations, or enhancements beyond standard SaaS capabilities, Aaseya follows a consultative engagement approach to define scope, assumptions, and delivery effort. Any such work is delivered as professional services and priced based on the agreed scope, delivery model, and complexity. No separate licence or mandatory maintenance charge is applicable for the delivered work product. Customers may modify or enhance the solution for internal use; however, the work product may not be transferred, sublicensed, or sold to third parties.

For commercial clarity, an **SFIA-aligned rate card** is provided for reference where additional configuration, integration, or custom development support is required.
