

Retriever

Leverage big data analytics for rapid and robust contact search results

- ✓ **Improve operational efficiency** with a unique single search entry box for faster, search results
- ✓ **Be empowered** to quickly and easily identify and analyse data links for more holistic tracing
- ✓ **Improve productivity** with ranked probability match results for swifter, smarter and more cost-effective investigations
- ✓ **Gain easy access** with user-friendly, browser-based, online touchpoints across devices and platforms

Did you know that around 50,000 UK residents move home every week*, locating and updating contact information is a continuous process for lenders, utility providers and public services. This trend — in conjunction with the exponential growth of genuine and fraudulent online activity and delinquency — has impacted traditional contact trace technologies and techniques.

The cumbersome, time-consuming and inexact trace processes of the past too often result in a minimum yield of exact match results while ignoring actionable results.

By harnessing the power of advanced technologies and enriched data analytics, Retriever can increase efficiency and helps boost results by extending search reach activities — even on minimal input data — producing sound returns ranked by likelihood.

Tap into broader, more effective searches for improved collections results

Retriever integrates TransUnion's network of proprietary and public datasets with enhanced analytics and trended credit data to connect the dots between identities, places, contact details and emails.

✓ Multiple systems integration

Retriever automates and streamlines processing, eliminating slow searches across multiple systems, forms and locations.

✓ Single entry searching

Because the search entry box works like a standard search engine, available contact data can be easily copied and pasted into a single field.

✓ Light-touch, expanded scope

Identify data entry errors and name and address variations for better-informed, reliable decisions.

✓ Ranked results

Search result returns are scored according to their similarities to improve time efficiency and cost effectiveness.

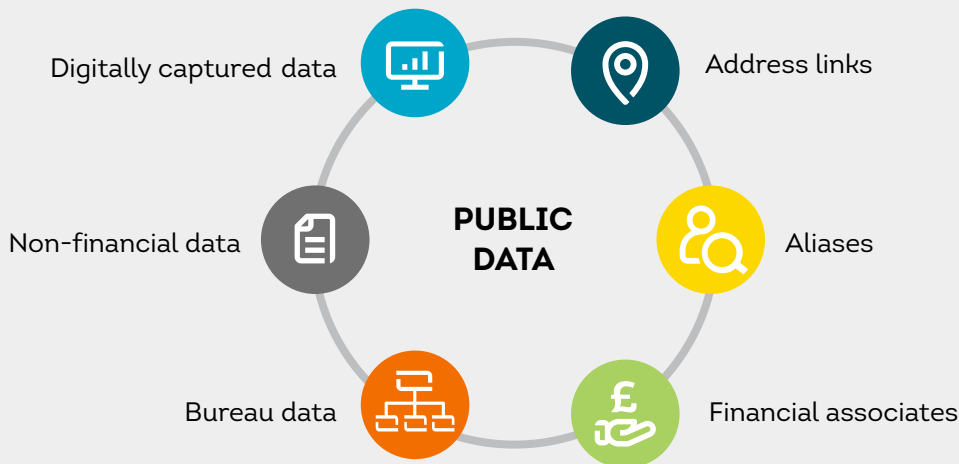

BENEFITS

Quickly and easily augment searches and increase actionable results

The advanced Retriever online tracing tool instantly returns direct match* — or ranked and scored — results according to similarities.

- **Improved efficiency:** Achieved via a user-friendly, single search entry box design.
- **Robust results:** Retriever returns ranked and scored, best-fit results for fast, cost-effective follow up.
- **Easily exportable:** Individual search results can be exported via CSV.
- **Omnichannel access:** Online web access enabled through standard browsers.
- **Supports regulatory guidelines:** Results align with transparency and fair treatment guidelines.
