G-Cloud 15: Managed Security Operations Centre (SOC)

Detect, Defend, Deliver Confidence

Gamma

Managed Security Operations Centre (SOC)

Protecting your organisation -every second of every day

Cyber threats are growing in scale, speed, and sophistication. Most organisations now face attacks that bypass traditional defences or overwhelm internal teams who are already stretched thin.

Gamma's Managed Security Operations Centre (SOC) provides the advanced protection modern organisations need.

Combining our certified cybersecurity analysts with Microsoft's leading security technologies, we deliver continuous monitoring, rapid incident triage, and ongoing security improvement - all as a fully managed service.

We don't simply notify you of threats. We analyse, enrich, and escalate incidents using agreed-upon processes, acting as a direct extension of your internal team.

With Gamma's Managed SOC, you gain:

- Around-the-clock protection, 24/7/365
- Faster, more accurate threat detection and response
- A security partnership built around your organisation
- A future-ready foundation for long-term resilience

Security shouldn't be overwhelming. With Gamma, it becomes clear, controlled, and confidently managed.

Microsoft 365 E5 Security Health Check & Roadmap

Intelligent Protection Powered by Microsoft Sentinel and Defender

Gamma's Managed Detection & Response (MDR) service is built around Microsoft Sentinel and Microsoft Defender — ensuring your organisation benefits from cloud-native, enterprise-grade security capabilities without needing to manage complex infrastructure.

Microsoft Sentinel provides powerful analytics, automation, and centralised visibility, while the Defender suite strengthens protection across endpoints, servers, and user activity. Together, they form a seamless ecosystem that allows our analysts to focus entirely on identifying, triaging, and escalating genuine threats

What this means for you:

- Zero infrastructure overhead - Sentinel runs as a cloud service
- Stronger visibility across your full environment
- Consistent, reliable security tooling managed by experts
- Rapid scalability as your estate grows
- Identity-based across governance through Azure

The result is a more intelligent, more responsive, and more resilient security posture, without the operational burden.

Why choose Gamma's Managed SOC?

GammaSecure

Cybersecurity is more than detecting alerts, it's about having the right people, processes, and context to handle them effectively. Gamma's SOC is designed to take on that responsibility for you, ensuring every event is interpreted correctly and acted on quickly.

What Gamma's Managed SOC delivers

24/7/365 Monitoring & Triage

Our analysts continuously monitor triggered detections, validate threats, and escalate through pre-agreed processes.

Structured Onboarding for Quick ROI

With templated onboarding and a proven methodology, your service is deployed rapidly and cleanly.

Continuous SIEM Tuning & Use-Case Development

We refine analytics rules, reduce false positives, and enhance detection coverage over time.

Highly Skilled Analysts

Our team is vendor-certified, experienced, and trained to operate in secure environments under recognised industry standards.

A Partnership-Led Security Model

Your SOC is not treated as a generic service. We invest the time to understand your infrastructure, operating procedures, and pain points so that our response actions and recommendations reflect your real environment.

We don't just support your security posture, we elevate it.

Service types tailored to your needs

GammaSecure

Every organisation's security maturity and operational capability is different. That's why Gamma offers two distinct service levels, ensuring the right level of protection for every environment.

Gamma's SOC SMB Service

Ideal for smaller organisations or teams with limited in-house security capability, this streamlined service delivers strong foundational protection without unnecessary complexity.

Perfect for teams that need:

- Simple, packaged deployment
- Rapid onboarding
- Essential detection and monitoring
- A predictable, low-overhead service

It's an accessible, powerful starting point for organisations looking to strengthen their cybersecurity posture with minimal effort.

Gamma's SOC MDR Service

A comprehensive, high-capability service designed for organisations requiring mature incident handling, deep visibility, and an operating model built around shared responsibility.

This full-service option includes:

- End-to-end handling of P1–P4 incidents
- In-depth triage, enrichment, and investigation
- Advanced tuning and use-case development
- Regular insights, reviews, and strategic recommendations

For organisations needing robust protection, specialist expertise, and continuous operational improvement, this service delivers a fully managed SOC without the cost or complexity of building one internally.
