

DIGITAL TRANSFORMATION

Strategic support and advice available for those considering cloud based Digital Transformation

What do we do?

We provide strategic support and advice to organisations who are moving services to the cloud as part of their Digital Transformation.

Digital transformation is the integration of digital technology into all areas of your business, fundamentally changing how you operate and deliver services and value to your customers. It is also a cultural change that requires organizations to continually challenge themselves and experiment with new ways of doing things.

Examples are business automation, process changes, automated reporting, digital signatures, better customer engagement, efficiency gains etc. We look at design & cost consideration, security, data compliance, performance and testing and governance.

How can we help?

Collaboration is a key to what we do, we work in partnership with your organisation and teams to understand your business problems and success criteria. Aligning our analysis to your business values we ensure we are working in the same direction with your business leadership.

As ITIL qualified consultants we provide a complete end-to-end service support, we specify and design your new service along with the service management criteria with you for your new digital cloud service. We will work with you to define the CSF's and KPI's ensuring your new service meets all your requirements and business drivers.

We review the existing "as is" environment identifying opportunities for improvement and a move to digital. We examine processes, to ensure we are exploiting technology, platforms and driving innovative products through best practice helping you cut waste and providing efficiencies.

Why choose Zest Consult?

Zest Consult Ltd delivers services across a wide range of services including Critical National Infrastructure, Local and National Government departments and business organisations.

Years of experience working across complex enterprise information services environments, our engineers, architects, and professionals help customers exploit emerging technology on the cloud such as big data, analytics and A.I. Integrating the new with the old optimizes hybrid, private, and public cloud capabilities.

Let's make it happen.

Our team will work with you to centralize processes and standardize the policies and processes across the whole business, generating greater efficiencies and cost savings. We drive standardization of services and products to reduce both the training burden and transition to new products helping the consolidation of services, desk resources, enabling efficiencies of scale and major cost savings.

Our consultants work collaboratively with your teams to prepare and implement audit requirements to achieve accreditation and certifications e.g., ISO2000, Cyber Essentials if that is a governance requirement.
