

CCTV

Strategic support and advice available for those considering cloud based CCTV

What do we do?

We provide strategic support and advice to organisations who are considering cloud-based CCTV and video services. This includes design & cost consideration, security, performance and testing, standards such as ONVIF & DVNP and data compliance.

Collaboration is key to what we do, we work in partnership with your organisation and teams to understand your business objectives and success criteria. Aligning our analysis to your business values we ensure we are working in the same direction with your business leadership.

We work with you to develop specifications, tender documents, and support you through to the procurement process including evaluation of the tender submissions. Our technical experts and consultants can design your system architecture and provide independent assurance on any new cloud CCTV system.

How can we help?

As ITIL qualified consultants we provide a complete end-to-end service support, we specify and design your new service along with the service management criteria with you. We work with you to define the CSF's and KPI's ensuring your new service meets all your requirements and business drivers. Once the service is live, we will assure the service so that you have complete peace of mind.

We review the existing "as is" environment identifying opportunities for improvement. We can examine processes, to ensure we are exploiting technology, platforms and driving innovative products through best practice helping you minimize waste and providing efficiencies.

Why choose Zest Consult?

Zest Consult Ltd delivers services across a wide range of services including Critical National Infrastructure, Defence, Local and National Government departments and business organisations.

Our team are experienced at working across complex enterprise information services environments and have designed and developed large enterprise level CCTV systems that integrate with other business critical systems.

Let's make it happen.

Our engineers and consultants have been at the forefront of developing the latest technical standards for video surveillance e.g. on the latest ONVIF specifications and developing the UK DVNP specification for video sharing across and between organisations. We understand how to manage to design and manage large scale deployments and the challenges of security, latency and data compliance in cloud environments.

We are collaborating with various standards organisations to develop AI standards for use in situation awareness across sectors such as transport, construction and Defence. Our architects and professionals help customers exploit emerging technology cloud opportunities and integrate the new with the old optimizing hybrid, private and public cloud service management capabilities.
