

G-Cloud 15 Service Definition Document Dec 2025

Rplus Analytics Overview

Rplus Analytics Solutions Limited is a specialist data and analytics consultancy providing cloud-first data architecture, engineering, analytics, governance, and data science services. This includes robust AI and machine learning capabilities to drive predictive insights and automation. Our expertise spans the full spectrum of modern data platform technologies, enabling organizations to transform their data infrastructure and unlock strategic insights.

We support public and private sector organizations to design, build, migrate, and operate secure, scalable, and cost-effective data platforms. Our approach combines deep technical expertise with a thorough understanding of regulatory compliance, security frameworks, and operational excellence requirements.

With proven experience across AWS, Microsoft Azure, and Google Cloud Platform (GCP), Rplus Analytics delivers tailored solutions that align technology investments with business objectives. Our team of certified professionals brings industry-leading practices to every engagement, ensuring platforms are robust, performant, and future-ready.

Cloud-First Architecture

Multi-cloud expertise across AWS, Azure, and GCP

Data Governance

Comprehensive compliance and security frameworks

Advanced Analytics

Data science and business intelligence solutions

AI Expertise

Machine learning and artificial intelligence implementation

Service Overview

The Informatica, Cloudera, Qlik, Databricks – Cloud Support service provides expert implementation, integration, migration, and ongoing support for modern cloud and hybrid data platforms. This comprehensive service enables organizations to maximize value from their data by ensuring platforms are robust, performant, secure, and strategically aligned with business objectives.

Our service model encompasses the complete lifecycle of data platform management, from initial assessment and architecture design through implementation, optimization, and continuous operational support. We work closely with IT decision-makers and procurement managers to deliver solutions that meet stringent technical, security, and compliance requirements while maintaining cost-effectiveness and scalability.

01

Assessment & Planning

Comprehensive evaluation of current state and future requirements

02

Design & Architecture

Cloud-optimized platform design aligned with business goals

03

Implementation & Integration

Expert deployment and seamless integration with existing systems

04

Optimization & Support

Ongoing performance tuning and operational excellence

Whether you're modernizing legacy systems, implementing new data platforms, or optimizing existing infrastructure, our service delivers the expertise and support needed to achieve successful outcomes. We specialize in complex, multi-platform environments and bring proven methodologies to ensure projects are delivered on time, within budget, and to the highest quality standards.

Platform Technologies

Informatica IDMC

Comprehensive data integration, quality, governance, and master data management across cloud and hybrid environments. Full implementation and integration expertise across Azure, AWS, GCP, and Cloudera platforms.

Cloudera

Enterprise data cloud platform for analytics, machine learning, and data engineering at scale. Hybrid and multi-cloud deployment, optimization, and operational support.

Qlik

Powerful business intelligence and data analytics platform enabling self-service visualization and governed data discovery. Integration with enterprise data platforms and cloud services.

Databricks

Unified data analytics platform combining data warehousing and AI capabilities. Lakehouse architecture implementation, optimization, and advanced analytics support.

Detailed Service Description

Implementation & Integration Services

Rplus Analytics delivers end-to-end cloud support services covering planning, design, implementation, integration, migration, and operational support. Our implementation methodology ensures seamless deployment of Informatica IDMC, Cloudera, Qlik, and Databricks platforms with minimal disruption to existing operations.

- Informatica IDMC implementation and integration across Azure, AWS, GCP, and Cloudera
- Cloud and hybrid data platform architecture and engineering
- Data integration, migration, transformation, and governance
- Platform customization, tuning, and optimization

Quality Assurance & Support

Our comprehensive quality assurance framework ensures platforms meet the highest standards of performance, security, and reliability. We provide ongoing operational support with clearly defined service level agreements and response times tailored to mission-critical data environments.

- Quality assurance, performance, and security testing
- Ongoing operational support with SLA-based response times
- Knowledge transfer, training, and documentation
- Continuous monitoring and proactive optimization

Service Capabilities

Architecture & Engineering

Design and implementation of secure, scalable cloud and hybrid data platforms optimized for performance and cost-effectiveness. Multi-cloud expertise ensuring vendor neutrality and strategic flexibility.

Data Integration & Migration

Seamless data integration, transformation, and migration services supporting complex enterprise data landscapes. ETL/ELT pipeline development and optimization using modern cloud-native tools.

Governance & Security

Comprehensive data governance frameworks including cataloging, lineage, quality management, and compliance. Integration with existing security and governance infrastructure.

Platform Optimization

Continuous performance tuning, capacity planning, and cost optimization. Regular health checks and recommendations to maximize platform ROI and operational efficiency.

Operational Support

SLA-backed operational support with clearly defined response times. Proactive monitoring, incident management, and problem resolution ensuring platform availability and reliability.

Training & Knowledge Transfer

Comprehensive training programs and documentation enabling internal teams to effectively manage and operate data platforms. Tailored enablement sessions for technical and business users.

Deployment Models & Flexibility

Rplus Analytics has extensive experience supporting live services and tailoring solutions to client-specific regulatory, security, and operational requirements. Our flexible service model accommodates diverse deployment scenarios, ensuring seamless integration with existing IT infrastructure and governance frameworks.

Buyer-Hosted Platforms

Full support for platforms hosted within your own cloud or on-premises infrastructure. We work within your security boundaries and compliance requirements while delivering expert implementation and support services.

Third-Party Hosted

Expertise in managing and optimizing platforms hosted by third-party providers. Coordination with hosting partners to ensure service continuity and performance standards are maintained.

Hybrid & Multi-Cloud

Specialized capabilities in complex hybrid and multi-cloud environments. Seamless integration across on-premises, AWS, Azure, and GCP infrastructure with unified governance and management.

The service supports integration with existing governance and catalogue services, enabling organizations to maintain consistency across their data estate. We align with established IT service management practices, change control processes, and security frameworks to ensure smooth collaboration with internal teams.

Our approach recognizes the unique requirements of public sector organizations, including compliance with government security classifications, data sovereignty requirements, and procurement regulations. We bring proven experience working within these frameworks while delivering innovative cloud solutions.

Service Value Proposition

1

Platform Availability

Support for mission-critical data platforms

2

Implementations

Proven track record across sectors

3

Cloud Platforms

Multi-cloud expertise and certification

Why Choose Rplus Analytics

Organizations choose Rplus Analytics for our deep technical expertise, proven delivery methodologies, and commitment to client success. Our specialists bring certified skills across all major cloud platforms and data technologies, combined with practical experience delivering complex enterprise projects.

- Technical Excellence: Certified professionals with deep platform expertise and architectural knowledge
- Proven Delivery: Structured methodologies ensuring projects are delivered on time and within budget
- Client Focus: Tailored solutions aligned with specific business objectives and constraints
- Continuous Innovation: Staying current with latest platform capabilities and industry best practices
- Risk Management: Comprehensive testing, validation, and quality assurance throughout delivery

Contact Details

Supplier

Rplus Analytics Solutions Limited

Specialist data and analytics consultancy delivering cloud-first solutions for enterprise and public sector organizations.

Primary Contact

Support Hours

Monday to Friday

9:00 AM to 5:00 PM (UK time)

Extended support hours available for mission-critical services under SLA agreements.

Get Started

Ready to transform your data platform capabilities with expert cloud support services? Rplus Analytics is committed to helping organizations maximize the value of their Informatica, Cloudera, Qlik, and Databricks investments through comprehensive implementation, integration, and operational support services.

Initial Consultation

Schedule a discussion to explore your requirements and objectives

Platform Assessment

Comprehensive evaluation of current state and opportunities

Tailored Proposal

Customized service plan aligned with your needs and budget

Service Activation

Rapid onboarding and engagement kickoff

Whether you're planning a new platform implementation, migrating existing systems to the cloud, or seeking to optimize current infrastructure, our team is ready to support your journey. Contact us today to discuss how Rplus Analytics can deliver the expertise and support needed to achieve your data platform objectives.

G-Cloud 15 Framework: This service is available through the UK Government's G-Cloud 15 framework, enabling streamlined procurement for public sector organizations. Our service definition meets all framework requirements and supports compliant, efficient procurement processes.
