

Resilience (ISO 22301) Consultancy Services

NCC Group employs experienced professionals helping with business resilience and ISO 22301 alignment processes. From initial scoping, gap analysis and readiness assessments to documenting and implementing Business Impact Analysis, Business Continuity and IT Disaster Recovery Plans, through to remediation, testing, maintenance and certification, we can manage your entire compliance programme.

Protect your reputation by adopting a trusted standard

ISO 22301 is a highly regarded standard for business continuity management, which has been adopted across several organisations to provide a proven, mature and effective mechanism for protecting your critical business functions using a risk-based approach.

Design and implement recovery strategies around critical business processes

By implementing a recovery strategy aligned to ISO 22301, business processes are prioritised based on their criticality to the organisation. This ensures a clearer understanding of the sequence of business processes to be recovered so that the organisation can resume normal operations in a timely manner reducing unnecessary downtimes.

Improve risk management through Business Impact Analysis

A well-defined and consistent business impact analysis helps organisations define the criticality of business processes based on their importance to the organisation. This helps aid the timely recovery of key business processes and supporting technology elements

Identify dependencies with other departments and external service providers

Identify dependencies with other departments within the business and external service providers, such as those who support critical applications, systems and infrastructure, so organisations are aware and can incorporate Service Level Agreements to support recovery activities.

Reduce project risk by using an experienced team

NCC Group's team of experienced resilience and qualified ISO 22301 professionals have helped design and implement resilience strategies across many organisations of all sizes, in both the private and public sector. This experience allows the team to identify and advise you on the best approach using NCC Group's well-proven and flexible methodology.

Benefits

- Protect your reputation by adopting a trusted standard
- Design and implement recovery strategies around critical business processes
- Improve risk management through Business Impact Analysis
- Identify dependencies with other departments and external service providers
- Reduce project risk by using an experienced team

Resilience & ISO 22301 Consulting Services

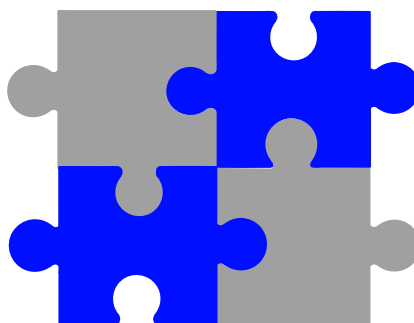

Visibility

Defined roadmap and costs to help you plan your implementation programme

Reduced Risk

Reduced programme risk to due to consistent implementation methodology

Future Business

Recover business and operations quicker

Maintain Compliance

Compliance is easier to maintain over the long term due to the NCC Group approach

Scoping Study

NCC Group will determine the scope of the resilience programme by undertaking a small number of collaborative workshops in which a review will be conducted to identify the organisation's current position, your business and recovery needs, any restrictions or opportunities and your end goals. Following the workshops, NCC Group will provide a detailed scope definition and implementation programme for your organisation.

As the deliverable from this stage detailed report is provided with recommendations, an outline plan, prioritised actions and high-level implementation costs.

Resilience Consultancy

NCC Group can conduct a business impact analysis to determine the critical business processes, identify the key dependencies and the applications, systems and infrastructure supporting the business processes to determine recovery priorities of the organisation's business processes and technology elements using either NCC Group's own methodology or the customer's own approach.

ISO 22301 Readiness Assessment or Gap Analysis

Once NCC Group has determined the scope, an assessment can be made of the appropriate parts of the organisation against all relevant parts of the ISO 22301 standard.

Summary

- You will be supported by an experienced consultant who is an ISO 22301 qualified Implementer.
- NCC Group has supported a number of organisations with their recovery planning and implementations. We have also carried out several Gap analysis and readiness assessments.
- NCC Group's experience cuts across industries, technologies, cultures and geographies, and provides an organisation with pragmatic risk and security advice with business outcomes at the heart of recommendations.
- The team can, where necessary, call on the wider NCC Group family containing world-class experience in Threat Intelligence, Incident Response, Technical Security Consultancy, Data Protection and Privacy legislation and other areas.
- NCC Group often takes clients past just the ISO 22301 certification stage, helping to provide ongoing detailed planning, programme and project management of various work streams and delivery of implementation services.

A recent endorsement we received from a client was as follows:

"I just wanted to pass on my thanks for [Consultant's] input in relation to our ISO project. The audit went very well and is testament to his organisation, planning and understanding. [Consultant's] strategic thinking is a valuable skill which has no doubt got us to this point and will surely lead to a successful Stage 2 assessment". Kuehne and Nagel Aerospace and Defence."

About NCC Group

NCC Group is a global expert in cyber security and risk mitigation, working with organisations to protect their brand, value and reputation against the ever-evolving threat landscape.

With our knowledge, experience and global footprint, we are well placed to help organisations identify, assess, mitigate and respond to the risks they face.

We are passionate about making the Internet safer and revolutionising the way in which organisations think about cyber security.
