

Cyber Security Programme Assurance

NCC Group's Cyber Security Programme Assurance service ensures our clients fully understand the benefits of strategic investments within Cloud Security. It operates as a regular checkpoint throughout engagements by assessing your current information and cyber security project(s) against your internal programme methodology and structure, and against the expected outcome. Where a group of projects make up a programme of work that is intended to meet business objectives, NCC Group will assess this programme as a whole or at the individual project level to measure if the outcomes are on time, to budget and to the required level of quality.

NCC Group's engagement model is designed to ensure that programme assurance is embedded at the start of every cloud transformation project. Our process encompasses both delivery and programme leaders, focusing on managing the risks through a communication model between NCC Group and the end client.

By implementing a continuous assurance structure during cloud based engagements, NCC Group are able to provide real-time feedback and solutions to potential challenges. Our methodology adopts stringent KPI's from the outset, ensuring the project has a reference point to drive a successful programme delivery.

Key Benefits

- Programme assurance can be aligned to any security project
- Enables you to understand areas where resources need to be targeted
- Assurance can be applied at different project lifecycle stages
- Can be repeated to demonstrate quality improvements for future assurance
- Provides assurance and recommendations to help target failing projects
- Will highlight project methodology failures within the programme.

About NCC Group

NCC Group is a global expert in cyber security and risk mitigation, working with organisations to protect their brand, value and reputation against the ever-evolving threat landscape.

With our knowledge, experience and global footprint, we are well placed to help organisations identify, assess, mitigate and respond to the risks they face.

We are passionate about making the Internet safer and revolutionising the way in which organisations think about cyber security.
