

Cyber Security Governance

NCC Group provides cyber security strategy and governance services that enable our clients to achieve their strategic business objectives. NCC Group helps to develop the right organisational, technical and process governance structures for the delivery of effective cyber security programmes. These services help organisations manage evolving threats, reduce risk exposure and improve business compliance. We can also support your compliance requirements through gap analysis and implementation services based on a wider range of current and forthcoming regulatory requirements as well as Industry frameworks including as PCI, NIS2, DORA, Cyber Resilience Act, HIPAA, EU AI Act, and SOX along with cybersecurity standards ISO27001, ISO42001, ISA 62443, CMMC and FedRAMP. Our ISO 17025 accredited lab supports clients with frameworks and standards such as CTAS, CAS (S), CPA, CPNI CAPPs / AACS and GSMA NESAS, 3GPP.

Business efficiency

By intelligently applying key principles and concepts of cyber security across the people, process and technology domains, we increase efficiency by assuring an equitable balance of investment across these three areas in all aspects of business operations.

Increases resilience

These services ensure that organisations have the right response and recovery plans, procedures and processes in place to improve operational resilience and ability to react to the evolving threat landscape.

Establishes best practice

NCC Group provides advisory services on the establishment and measurement of the right level of cyber security governance to comply, align and embed recognised industry best practice in oversight of cyber security in your organisation.

Provides an enterprise framework

NCC Group provides advisory services on the establishment and measurement of the right level of cyber security governance to align and embed enterprise frameworks using best practice from experience and emerging trends tailored for your organisation.

Intelligent Response

These services enable intelligent organisational responses to evolving security threats and ensure that you have the right governance structures in place to be flexible and agile enough to respond to changes in the threat landscape.

Benefits

- Business efficiency through intelligent application of cyber security governance structures
- Increases resilience and response capability to cyber security incidents
- Embedded and established organisational cyber security best practice
- Provides an enterprise managed methodology or framework for cyber security risk management
- Enables intelligent organisational responses to evolving security threats.

Cyber Security Governance

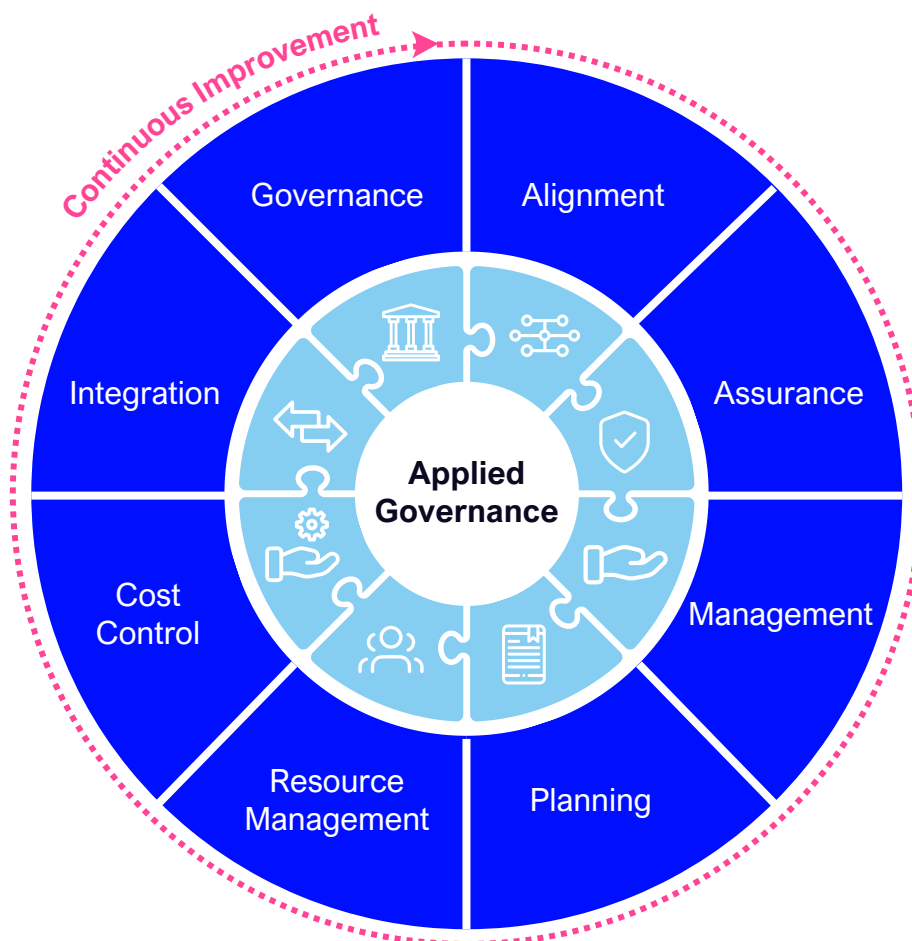

- Strategy and Business Alignment
- Operational Resilience
- Integrated Risk Management
- Intelligent Metrics and Reporting

NCC Group provides cyber security strategy and governance services that enable clients to achieve their strategic aims and objectives. We work with our clients to help develop the right governance structures for the delivery of organisational improvement and remediation programmes. Our cyber security governance advice helps organisations to adapt to evolving threats so minimising their risk exposure.

NCC Group's service solution lifecycle involves distinct phases including determining the 'as-is' state of cyber security governance for the organisation by assessment against recognised standards and best practice. This is then followed by the production of the organisation's current state of cyber security governance maturity and oversight policies and standards procedures.

We then look to design services around strategy and business alignment by either reviewing or producing security improvement programme roadmaps and target operating models to deliver the organisational vision. Delivery of this vision or 'to-be' state is underpinned by the right level of governance design to support any programme or initiative to achieve the vision. We help our clients to ensure that the right level of governance is in place from the design phase to improve the efficacy and efficiency of actual delivery. \

Assurance and optimisation of the cyber security governance structures is a continual process of improvement and adjustment for organisations. This is often difficult to resource and have the mechanisms and effort required to do for many clients. Our solution provides that continual improvement process and allows adjustments to be made to adapt and transform cyber security governance at the pace and agility required.

Advise: Determine the 'as-is' state of cyber security governance for the organisation by assessment against recognised standards and best practice. Production of the current state of cyber security governance maturity and oversight policies and procedures.

Design: NCC Group's design services include strategy and business alignment by either reviewing or producing security improvement programme roadmaps and target operating models to deliver the organisational vision.

Deliver: Delivery of this vision or 'to-be' state is underpinned by the right level of governance design to support any programme or initiative to achieve the vision. We help our clients to ensure that the right level of governance is in place from the design phase to improve the efficacy and efficiency of actual delivery.

Assure and Optimise: Assurance and optimisation of the cyber security governance structures is a continual process of improvement and adjustment for organisations. We can resource and provide the mechanisms and effort required to do for our clients. Our solution provides that continual improvement process and allows adjustments to be made to adapt and transform cyber security governance at the pace and agility required.

NCC Group provides cyber security strategy and governance services that enable clients to achieve their strategic aims and objectives. We help develop the right governance structures for the delivery of organisational improvement and remediation programmes.
