Continuous Threat Exposure Monitoring

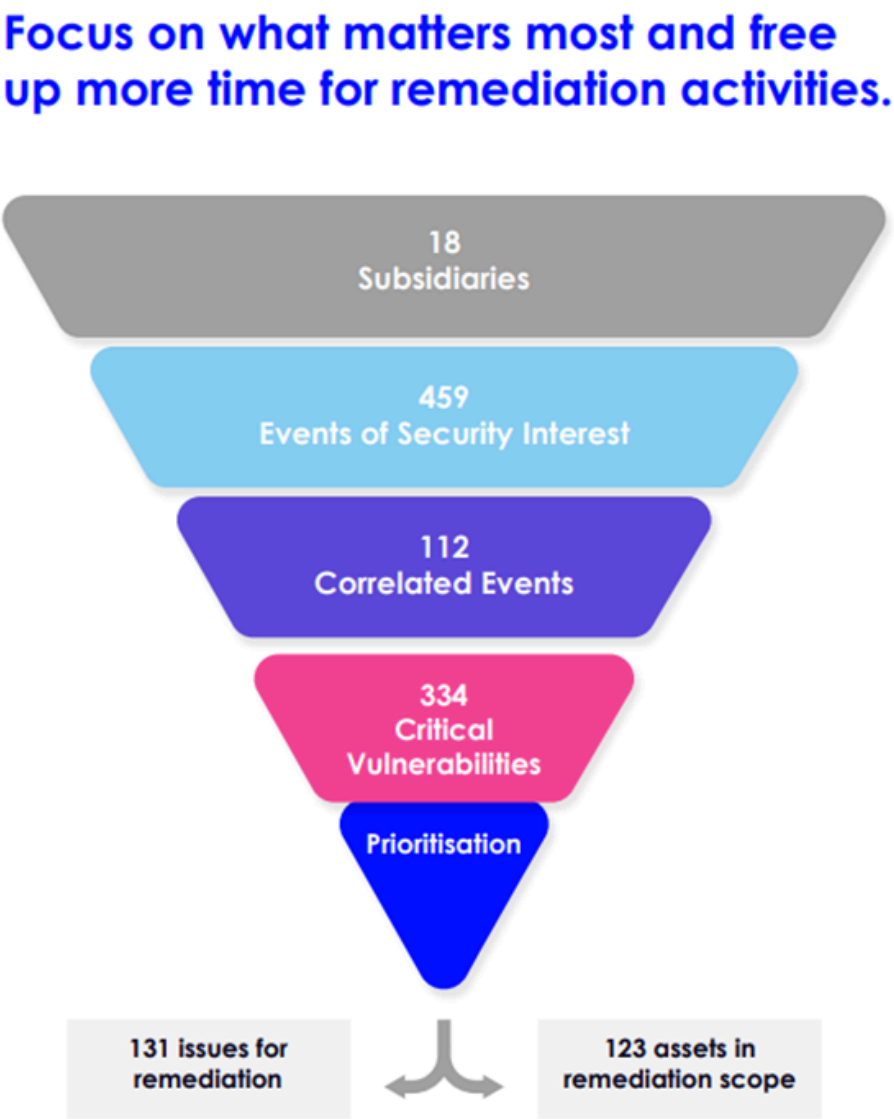
Service Overview

NCC Group's Continuous Threat Exposure Management service is designed to be an integral part of the Client's security team- offering contextualised and prioritised results, enabling a client to utilise their valuable resource where it matters most, mitigating risks.

NCC Group leverages its global pool of experienced vulnerability Consultants to deliver the Service, which provides the Client with a continuous view of their attack surface and appetite for risk. Including asset discovery and context on the impact and exploitability of exposure in their environment. The overall outcome results in streamlined action, reduced exposure, and enhanced security resilience for confident mitigation across the Client's organisation.

Our people-powered, tech-enabled approach ensures that clients have visibility of their attack surface, identifying contextual risks to be addressed and feeding into other security programmes of work.

NCC's CTEM Service Offering aids in the reduction of Shadow IT by performing continuous asset discovery capabilities, followed by continuous exposure identification.



Risk, Vulnerability and Misconfiguration Identification

Powered by Third-Party Vendor technology, NCC Group will identify vulnerabilities, risks, misconfigurations and security health issues across the Client's environment, building a clear picture of the vulnerable and risk-prone areas within the Client's organisation.

Exposure identification is performed continuously, to ensure that the Client and NCC Group are always targeting an up to date inventory and the latest exposures present in the Client's environment, including any emerging threats. All identified exposures are enhanced with threat intelligence, providing additional context and prioritisation.

Reporting & Dashboards

As part of the Service, NCC Group will provide the Client with access to the relevant CTEM Portal for reporting, dashboards and insights into ongoing security and risks, along with any remediation recommendations.

- Client's will receive access to the CTEM Portal where tickets and interactive dashboards will be presented to the Client.
- Monthly reports will be shared and discussed via monthly interactive sessions between the Client and NCC Group covering issues, data presentation and guidance on remediation priorities.

Vulnerability Consultant

NCC Group will provide a Vulnerability Consultant to act as the central point of contact for the Client, overseeing the applicable CTEM Service and providing advice and support where needed.

Service Autoscaling

NCC Group understands that environments are susceptible to frequent changes, and as a result clients can add and/or remove Assets from the original scope as required. Requests must be made in writing, and NCC Group will work with Clients to determine if any Fee increase is required above what was agreed in the Statement of Work.

Why NCC Group?

- Access to a dedicated consultant
- Service integrations
- Interactive monthly review meetings
- Recognised cyber security leader
