Identity Insights Assessment

Identity Insights

Organisations globally face the ever-increasing threat from unauthorised access, insider threat misuse, and credential theft. Managing and securing user access in modern organisations has become increasingly challenging due the growth in technology adoption, complex IT environments, and remote work. Inefficient access controls and lack of identity insights expose organisations to an array of business and security risks.

Our Digital Identity Insights service is purpose-built to help organisations uncover hidden risks, process inefficiencies, and security gaps within their Identity and Access Management (IAM) landscape. By conducting a deep-dive analysis of account structures, access patterns, and employee identity data, we provide a clear, data-driven view of your current identity framework.

Through this comprehensive review, we highlight vulnerabilities, misalignment's, and areas for improvement empowering your teams to take decisive action, enhance compliance, and build a more secure, efficient digital identity environment

Unlock the truth in your identity data

In the world of identity and access management, what you don't know can hurt you. That's why our Identity Insights assessment doesn't just skim the surface it dives deep into the heart of your Active Directory and access processes to uncover the blind spots, bottlenecks, and buried risks that quietly erode security and efficiency.

We surface the essentials

- Who has access—and shouldn't.
- Which accounts are dormant, orphaned, or dangerously over privileged.
- Where password policies are falling short.
- And how long it really takes to get new joiners up and running.

From identifying unconstrained delegation risks to flagging service accounts with no clear owner, we turn raw identity data into actionable intelligence. Whether it's tightening compliance, accelerating provisioning, or cleaning up the clutter of unclassified groups, we help you take back control with clarity, speed, and confidence.

Because in IAM, insight isn't a luxury it's your first line of defense. We deliver a full report which highlights the following:

Account and access

- Password expiry compliance and policy requirements
- Orphaned accounts identification
- Dormant accounts with last used activity breakdown
- Comprehensive account status overview
- Discovery of highly privileged accounts
- Accounts with unconstrained delegation risks
- Unclassified or uncategorised groups

Process insights

- Average time to provision AD accounts for new
- joiners
- Active user accounts post-termination
- Employees with access beyond role or
- department norms
- Analysis of employees lacking AD access
- Service accounts without designated owners
- Employees without assigned managers

About NCC Group

NCC Group is a global expert in cyber security and risk mitigation, working with organisations to protect their brand, value and reputation against the ever-evolving threat landscape.

With our knowledge, experience and global footprint, we are well placed to help organisations identify, assess, mitigate and respond to the risks they face.

We are passionate about making the Internet safer and revolutionising the way in which organisations think about cyber security.
