

Cyber Security Virtual Teams

NCC Group's Cyber Security Virtual Teams (Security On Demand) mitigate client resourcing and capability gaps where skills are difficult to source and deploy at short notice. Meeting the need to have flexible, highly skilled, experienced people available, the Cyber Security Virtual Teams (Security On Demand) address short and long-term demands for senior levels (CISO/CIO/CDO) and specialist technical skills. As well as the benefits described below, this service provides flexible delivery profiles to meet client requirements and bandwidth; access to the extensive resource skills and capabilities of NCC Group; access to the extensive content and knowledge within NCC Group, and advice on information security policy, strategy and programme management

Resilience and availability

By intelligently applying the key principles and concepts of cyber security across the people, process and technology domains, NCC Group helps address resource resilience and availability issues to ensure delivery success. This is done by assuring an equitable balance of effort across these three domains in all aspects of business operations using our security transformation strategy resource expertise.

Cost effective delivery

NCC Group's Cyber Security Virtual Teams (Security On Demand) service helps organisations to reduce costs through the use of an on-demand consultants in order to help improve a client's cyber security capability and ability to react to the evolving threat landscape.

Pay on demand expertise

NCC Group provides advisory services and expertise on a 'pay on demand' principle where you only pay for the skills and capability you need, when you need them. This is to ensure that you only pay for the right level of effort and focus in helping to drive through cyber security improvements and increasing maturity.

Knowledge access

NCC Group provides advisory services that have access to one of the largest global cyber security talent pools and knowledge banks. This service ensures that the latest advice, guidance and best practice from experience and emerging trends are provided and tailored for your organisation. This is done by using the latest cyber threat assessments, threat intelligence sources, information sharing platforms, research projects and knowledge transfer.

Demand capacity and availability

Our Security On Demand service enables the use of intelligent security controls assessment relating to the organisation's operational environment and business functions. We ensure that you have the right security resources in place, at the right time, at the right level to be flexible and agile enough to respond to changes in the security threat, risk and regulatory environments.

Benefits

- Resilience and availability of delivery and advisory resource
- Use of NCC Group's on-demand consultancy model is cost effective
- Only pay for the skills and capability required for the period required
- Access to one of the largest global cyber security talent pools
- Ability to meet short term peaks and long term interim roles on demand.

Virtual CISO

Interim CISO's are available to work closely with your C-level stakeholders to set direction, define cyber security strategy and help manage large scale cyber transformation in your business.

Information Security Manager

To facilitate management and improvement of business as usual (BAU) operations and team performance. Leading and providing hands on capability as necessary.

Security Architects

Business aligned security and solutions architects to assist and guide the design, implementation and maintenance of technical and operational security controls.

Programme Director

Senior programme leaders will help you to drive security improvement programmes forward, provide programme sponsor reporting and effectively manage budgets and resources.

GRC Specialists

Experts in security frameworks such as NIST/ISO/GDPR/PCI, compliance, risk management, third party management, security programme governance, policies.

Security Analyst

Cyber security experts to support security operations, policy development, analysis, investigations and many other BAU security functions.

NCC Group's Cyber Security Virtual Teams (Security On Demand) service mitigates client resourcing and capability gaps where skills are difficult to source and deploy at short notice. Meeting the need to have flexible, highly skilled, experienced people available, Cyber Security Virtual Teams (Security On Demand) address short and long-term demands for senior levels (CISO/CIO/CDO) and specialist technical skills.

The service helps to improve the cyber security posture and resilience of your organisation by adding the right level of resource and capability. The teams can use all of the internationally recognised standards such as, NIST CSF, ISO 27001:2013 and CIS Top 20 (covering all aspects of cyber security from governance, risk and compliance to network security and training), to assess your maturity and help articulate areas of strength and improvement to all stakeholders within your organisation.

Some typical roles include:

CISO as a Service (CISOaaS)

Interim CISOs are available to work closely with your C-level stakeholders to set direction, define cyber security strategy and help manage large scale cyber transformation in your business..

Programme Director

Senior programme leaders will help you to drive security improvement programmes forward, provide programme sponsor reporting and effectively manage budgets and resources.

Governance Risk Compliance (GRC) Specialists

Experts in security frameworks such as NIST/ISO/GDPR/PCI, compliance, data protection, risk management, third party management, security programme governance and policies.

Security Architects

Business aligned security and solutions architects to assist and guide the design, implementation and maintenance of technical and operational security controls.

Security Analysts

Cyber security experts to support security operations, policy development, analysis, investigations and many other BAU security functions.

These On Demand people have many years of cyber security experience, have held management level roles and worked at senior management and/or board level on engagements with multiple clients. They have a proven track record of delivering effective strategy and leadership into organisations.

The team has in depth knowledge of compliance, standards and relevant data protection legislation. Typical responsibilities for Security On Demand services include:

- Driving or defining the strategic direction of Information security and risk management across the organisation;
- Fostering cooperation with compliance, technology and business functions to ensure that all relevant security standards, frameworks and legislations are adhered to;
- Working alongside the CIO/CTO to effectively manage information security risk across the organisation;
- Leading the Information Security team working with and providing security support to engineering, architecture, operations and application teams and the business;
- Driving security programs of work such as Data Loss Prevention and Identity and Access Management;
- Developing the Information Security team to work across the business to develop and implement effective policies, procedure, standards and guidelines;
- Guiding the strategic direction for key programs covering security improvement, compliance and Merger & Acquisition;
- Designing and developing an information security governance framework;
- Creating or expanding an Information Security/Risk Management capability, ensuring there are no large single points of failure within the collective expertise;

- Developing, defining and / or managing a security governance model to ensure the information security function integrates with the wider business and supports operations effectively.

Cyber Security Virtual Teams mitigate client resourcing and capability gaps where skills are difficult to source and deploy at short notice. Meeting the need to have flexible, highly-skilled, experienced people available, the Cyber Security Virtual Teams (Security On Demand) address short and long-term demands for senior levels (CISO/CIO/CDO) to specialist technical skills.

NCC Group achieves this by helping clients deliver:

- Resilience and availability of delivery and advisory resource
- Use of the on-demand consultancy model is cost effective
- Only pay for the skills and capability required for the period required
- Access to one of the largest global cyber security talent pools
- Ability to meet short term peaks and long-term interim roles on demand
- Mitigates recruitment and retention impacts and concerns
- Access to industry-leading resources and people in cyber security
- Reduces business risk and improves focus on core business functions
- Improved quality achieved by using people with specific in-demand expertise

About NCC Group

NCC Group is a global expert in cyber security and risk mitigation, working with organisations to protect their brand, value and reputation against the ever-evolving threat landscape.

With our knowledge, experience and global footprint, we are well placed to help organisations identify, assess, mitigate and respond to the risks they face.

We are passionate about making the Internet safer and revolutionising the way in which organisations think about cyber security.
