

Cyber Risk Quantification (CRQ)

Cyber Risk Quantification (CRQ)

We are thrilled to announce the launch of our groundbreaking Cyber Risk Quantification (CRQ) offering, a cutting-edge solution designed to revolutionise how organisations assess and manage their cybersecurity risks.

Our solution is a consultant led, CRQ offering utilising the advanced algorithms of SAFE Security's AI-driven, real-time CRQM platform, a leading global cyber risk quantification organisation to provide our clients with unparalleled insights into their cyber risk landscape. By quantifying cyber risks in terms of potential financial impact, probability, and severity, our solution empowers organisations to make informed decisions about resource allocation, risk mitigation strategies, and cybersecurity investments.

With our CRQ offering, clients can accurately measure, prioritise, and manage cyber risks, enabling them to strengthen their cybersecurity posture and protect their valuable assets effectively. Whether it's identifying vulnerabilities, evaluating the effectiveness of security controls, or demonstrating the ROI of cybersecurity initiatives, our CRQ platform equips clients with the actionable intelligence they need to proactively safeguard their business operations and reputation in today's increasingly digital world.

Our offering is a personalised one, a point in time report enabling our clients to assess and comprehend their unique risk landscape with precision. This Rapid CRQ Assessment has been developed as we know and understand the continuous challenges needed to optimise security investments with comprehensive analysis. Within the report we provide clarity on where our clients resources can offer the most protection for their business. We also bridge the gap by translating intricate cybersecurity metrics into clear, actionable insights tailored to resonate with clarity, precision and confidence with the clients board members which is paramount within today's environment.

The benefits to our clients are derived not only from our people, expertise, and heritage but also specific benefits for our CRQ offering include:

- **Quick Identification of Vulnerabilities:** Our process enables us to swiftly identify potential vulnerabilities and weaknesses in our clients organisation's cybersecurity posture, visualising risk along the MITRE ATT&CK kill chain for a thorough look at expected loss event frequency and effectiveness of existing controls allowing for timely action especially when there is likely to be financial impact.
- **Prioritisation of Resources:** By focusing on high-risk areas, we help our clients strategically allocate resources and investments effectively, ensuring that they address the most critical cybersecurity concerns first.
- **Cost-Effective Solution:** We provide valuable insights without requiring extensive time or resources, offering a cost-effective solution for assessing and managing cyber risks.
- **Enhanced Decision-Making:** We provide clear, business-oriented insights that empower decision-makers to make informed choices regarding cybersecurity strategies and resource allocations.
- **Improved Communication:** Our assessments translate complex technical details into understandable insights, facilitating communication between technical teams and executive leadership, ensuring that cybersecurity concerns are effectively addressed at all levels of the organisation, especially the board room.
- **Risk Mitigation:** By identifying and quantifying cyber risks early, our rapid assessments enable proactive risk mitigation measures to be implemented promptly, reducing the likelihood and impact of potential cyber incidents.
- **Compliance Readiness:** We help our clients assess their compliance with relevant regulatory requirements and industry standards, ensuring that you take corrective actions as needed to maintain compliance.
- **Demonstration of Due Diligence:** Our rapid assessments demonstrate our clients commitment to cybersecurity due diligence to their stakeholders, customers, and regulatory bodies, enhancing trust and reputation.

About NCC Group

NCC Group is a global expert in cyber security and risk mitigation, working with organisations to protect their brand, value and reputation against the ever-evolving threat landscape.

With our knowledge, experience and global footprint, we are well placed to help organisations identify, assess, mitigate and respond to the risks they face.

We are passionate about making the Internet safer and revolutionising the way in which organisations think about cyber security.
