

Dapian Data Sharing Agreement (DSA)

Service Description

The Dapian DSA Module is a bolt-on module to the Dapian digital DPIA platform, which enables organisations to complete, signoff, store and share Data Sharing Agreements (DSAs).

Dapian promotes 'Data Protection by Design & Default' and has been designed by a range of public sector organisations and national bodies to empower non Information Governance (IG) experts to complete their own ISAs.

Where necessary users can request support in completing an ISA from colleagues as well as ask other organisations to collaborate and sign up to an ISA. Dapian facilitates automated review triggers to encourage owners to regularly review their ISAs. The ISA library provides a wealth of previously completed ISAs for users to consider for reuse/repurpose.

Dapian is fully compliant with the requirements of the General Data Protection Regulation (GDPR).

Customer responsibilities

Customer responsibilities primarily focus on the issue of 'culture change' within their organisation and with their project partners and suppliers. By promoting Dapian as the route through which staff should complete their ISA. Organisations can increase the likelihood that an ISA is completed at the right time and to the right quality through guided ISA templates (i.e. putting experts on the shoulders of non-experts).

If Single Sign On is requested then the organisation is required to connect the supplier with a contact who is responsible for the organisation's corporate identity platform.

Onboarding process headlines

- Product demonstration;
- Implementation of Dapian;
- Virtual platform training;
- Go Live.

Ordering and invoicing process

All ordering and invoicing will be handled by Coalescent Ltd, all invoices must be paid within 10 days of the date of issue
