

Cloud Services

Introduction

For over 3 years, Asura has been leading the way in sourcing unique technology talent, from executive search to contracting, from projects, services and outsourcing to innovative partnerships, we cover it all.

Service benefits

We have created our Statement of Work Platform designed to provide Public Sector organisations the capability to procure expert talent and project services to deliver defined project outcomes. Designed to provide flexibility, scalability and with a delivery focus, we put together project teams and delivery teams based on your exact requirements taking full accountability for the scope of the services agreed.

Service features

Asura provides Specialist Cloud and Digital Services to Public Sector Clients. Within the SOW Platform all our projects and services are delivered through a defined Service Framework which allows the flexibility to scale on demand, while all projects are managed within a strict governance structure to provide visibility of progress, deliverables and spend. We take full accountability within the scope that's agreed and we offer an agile engagement models to support organisations in procuring the best route of services, whether this be through fixed price, agreed work packages and/or Time & Materials based models. Engaged through our service framework designed to increase maturity, provide agility and deliver value to meet business demand.
