PRICING

IQVIA Patient Finder is a secure, cloud-based solution that enables a rapid identification and feasibility assessment of patient cohorts across structured and unstructured clinical data within EMR/EHR and hospital systems. It supports use cases for clinical research, trial feasibility, value-based healthcare, guideline optimisation, and outcomes reporting by improving patient discovery accuracy and efficiency. To do so, the IQVIA Patient Finder requires the integration of clinical data into the solution Common Data Model, by using validated FHIR profiles.

The following yearly subscription price is exemplary for a standard IQVIA Patient Finder Project, and it is inclusive of the necessary Licenses to operate the solution.

The Licenses are considered per Site/Deployment, as normally every Site using the Patient Finder works as an independent entity. Broader multi-site deployments can be considered and priced on a case-by-case basis.

SaaS Pricing Per Site/Deployment, Per Year:

Licences	Subscription Fee per Year
IQVIA Patient Finder License	£ 120,000.00

The subscription does not consider the implementation services required to set up the solution. Those are valued separately and are dependent on the complexity of the project. Complexity is to be assessed on a case-by-case basis, and two predetermined models are considered:

- **Basic Model:** case where EMR to integrate is known, mapped to FHIR profiles, and no additional data from other data sources is considered.
- **Advanced Model:** EMR to integrate is not known, or additional sources of data are considered to integrate. Potentially, NLP data annotation is required to train the NLP models.

Implementation Services range, valued as a one-time fee, independent from the subscription value:

Type of Implementation	One-time Fee
Basic Model	£ 125,000.00
Advanced Model (including NLP Data Annotation)	£ 200,000.00

Key Assumptions:

- a. Annual IQVIA Patient Finder Maintenance & Support is included within the Subscription price.
- b. Maintenance & Support considers fixes, updates, and particularly extensions of the Common Data Model (by considering more FHIR profiles, or more data within the integrated profiles).
- c. Software Maintenance Service, and the provision of fixes and updates is under its continuous coverage over the term of the contract, and the Licensor (IQVIA) has received due payment.
- d. At time of delivery, latest available version of IQVIA Patient Finder will be delivered.
- e. The Implementation Services Range is provided as indicative. Given the nature of the solution, and the complexity and variety of scenarios for the data integration, Services required to set up a full operational solution will have to be evaluated on a case-by-case basis, and its cost added to the subscription as a one-time fee.
- f. Integration with systems and databases that are not capable to send HL7, FHIR or XML, or out of service, or out of support contract are excluded, and should be assessed on a case-by-case basis.
- g. Integration to Third-party systems includes the related analysis and software development to connect from IQVIA side to the intermediary integration engine/ platform, any activities to be done at the third-party system side is the responsibility of Client or the respective third-party vendor.
- h. Updates on EMR, Data sources and Systems environment on the Client side, may impact on the IQVIA Patient Finder. Reestablishing the data feed between the Data Sources and the IQVIA Patient Finder may imply professional services not covered by the Support and Maintenance, and consequently not covered by the agreed subscription. A non-exhaustive list of these cases would include:
 - a. A new release of the EMR, implementing changes in the EMR data model, requiring a full data migration.
 - b. A change of EMR vendor at a given site, establishing a new data source.
 - c. Merge of Hospitals, implying the consolidation of data.
 - d. Requirement to integrate a new data source into IQVIA Patient Finder.

Additional Professional Services

- Available as required to meet individual client requirements.
