Service Definition Document

Application Rationalisation

Service type: Lot 3: Cloud Support

Service name: Application Rationalisation

Service description: We review and assess an organisation's application estate to identify duplication, cost drivers and performance issues. Through evidence-based analysis, we create a streamlined, modernised application landscape that reduces complexity, lowers cost and supports more integrated, cloud-ready service delivery.

Service features

- Full application estate review and inventory creation
- Identification of duplication, redundancy and unused systems
- Assessment of cost, licensing and support models
- Fit-for-purpose evaluation of each application
- Integration and data flow mapping
- Assessment of legacy risk and outdated systems
- Application categorisation and rationalisation options
- Future-state application architecture design
- Roadmap for consolidation and decommissioning
- Recommendations aligned to strategy and operating mode

Service benefits

- Reduced cost through consolidation of redundant applications
- Improved interoperability and data flow across systems
- Clear visibility of the full application estate
- Reduced legacy risk and improved operational stability
- Simpler, more scalable application architecture
- Better alignment between systems and organisational needs
- Increased efficiency through fewer, better tools
- Reduced support and maintenance burden
- Clear roadmap for modernisation and cloud migration
- Improved decision making with evidence-based recommendations
