Service Definition Document

Technology Roadmap

Service type: Lot 3: Cloud Support

Service name: Technology Roadmap

Service description: We develop technology roadmaps that align short-term priorities with long-term transformation goals. By understanding your strategic objectives, savings requirements and investment constraints, we create a practical, evidence-based plan that guides technology modernisation, improves service delivery and supports organisational, customer and workforce outcomes.

Service features

- Assessment of current technology landscape and digital maturity
- Alignment of technology plans to organisational strategy
- Development of short, medium and long-term roadmap phases
- Prioritisation of transformation initiatives and investments
- Identification of dependencies, risks and delivery constraints
- Cost modelling and savings opportunity analysis
- Integration of cloud, data and application strategies
- Sequencing of projects for practical implementation
- Stakeholder engagement to validate roadmap direction
- Clear visual roadmap deliverables for leadership audiences

Service benefits

- Clear direction for technology modernisation and transformation
- Roadmap aligned to strategic goals and organisational priorities
- Improved decision making on technology investment and sequencing
- Reduced risk through early identification of constraints
- More efficient allocation of resources and budget
- Stronger alignment between technology, services and user needs
- Long-term savings through planned consolidation and optimisation
- Better understanding of dependencies across programmes
- Improved engagement with stakeholders and leadership
- More predictable and manageable technology change pipeline
