Check Point Harmony Email and Collaboration MSSP

1 OVERVIEW

Cyber Security Defence Consultants work with organisations to improve and enhance their cybersecurity thresholds.

Our teams work within complex and diverse environments to achieve strategic, operational and realistic outcomes, including ISO/IEC27001, Cyber Essentials and Cyber Essentials Plus.

Over multiple consultancy contracts, we have developed and implemented information risk management processes that support our client's governance models and provide support to control specific target areas, improve processes and mitigate risk. This has increased security controls, reducing the organisation's risk appetite and cyber threats.

We engage experienced and qualified consultants who are up to date with all legislative practices to support organisations to manage risk effectively.

Our team holds qualifications including CISSP, CISM, CREST, CEH, OSCP and ISO/IEC 27001 Lead Auditor and Lead Implementer.

Our cyber security consultancy engagement process aligns with the NCSC Certified Cyber Security Consultancy Standard, ensuring a high-quality client journey including agreed deliverables, transparent and regular reporting, defined escalation paths, suitably skilled and qualified resources and focused delivery.

2 SERVICES

2.1 Check Point Harmony Email & Collaboration MSSP

We provide a fully managed email and collaboration security service using Check Point Harmony Email & Collaboration Advanced, delivered through the Check Point MSSP programme. This pay-as-you-go service provides comprehensive protection for Microsoft 365, Google Workspace and collaboration platforms without the need for in-house security operations capability.

As a Check Point MSSP partner, we take full responsibility for managing your email and collaboration security. Our SC-cleared security analysts monitor threats, manage policies, investigate incidents and report on your security posture. You receive enterprise-grade email protection with expert management included in a simple per-user monthly price.

Check Point Harmony Email & Collaboration Advanced provides protection against phishing, business email compromise (BEC), account takeover, malicious attachments and links across email and collaboration tools including Microsoft Teams, SharePoint, OneDrive, Slack and Google Drive.

The MSSP model means you do not need to access or manage the Check Point portal. We handle all configuration, monitoring and response on your behalf, providing you with regular reports and reviews to demonstrate your security posture.

Features

- Pay-as-you-go pricing with no long-term contract
- Cancel anytime with just 30 days notice
- Fully managed — we operate, you focus on business
- Protects Microsoft 365, Google Workspace and collaboration tools
- Real-time threat monitoring during UK business hours
