

The best way to protect your organization from phishing, malware, account takeovers and data loss

Strategic Overview

Check Point revolutionized email security in 2015, addressing the limitations of traditional gateways that failed to adapt to the cloud. With Check Point's patented security, connect via API, block malicious emails before they reach the inbox, protect collaboration tools, and get a total replacement for SEGs.

For email, Harmony Email & Collaboration provides an inline defense layer after the Microsoft 365/Google Workspace email gateway (or current gateway solution) and before email inbox delivery occurs.

This approach not only enables true preventative security, but it also improves compliance with regulatory requirements, and fundamentally shifts how enterprises should and continue to apply cloud security.

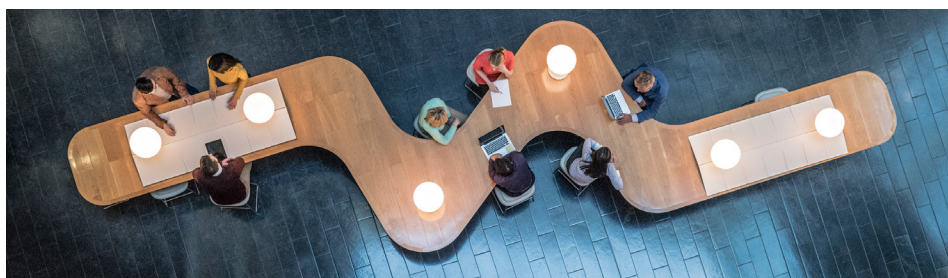

Enterprise Security Architecture

Check Point revolutionized email security in 2015, addressing the limitations of traditional gateways that failed to adapt to the cloud. With Check Point's patented security, connect via API, block malicious emails before they reach the inbox, protect collaboration tools, and get a total replacement for SEGs.

For email, Harmony Email & Collaboration provides an inline defense layer after the Microsoft 365/Google Workspace email gateway (or current gateway solution) and before email inbox delivery occurs.

This approach not only enables true preventative security, but it also improves compliance with regulatory requirements, and fundamentally shifts how enterprises should and continue to apply cloud security.

Core Highlights

- Largest email security platform in the industry
- Backed by the most extensive data
- Supported by the highest number of dedicated researchers
- Maintains the best catch rate
- Unified security at its best
- Generative AI features

Noteworthy Capabilities

- Secure Email Gateway (SEG) replacement – Comprehensive protection against email threats
- DMARC/SPF Implementation – Enhanced email authentication and anti-spoofing measures
- Unified interface – Can replace 4-5 tools with a single, streamlined platform

Product Specifics

Inline Prevention Architecture

- Pre-delivery threat analysis and neutralization
- Zero-second threat prevention
- Full SSL/TLS inspection capabilities
- Advanced sandbox detonation
- Real-time binary analysis

Zero Trust Implementation

- Identity-based microsegmentation
- Continuous authentication validation
- Granular least-privilege enforcement
- Behavioral analytics and anomaly detection
- Cross-cloud security policy orchestration

ML-Powered Threat Analysis

- Proprietary neural networks for threat classification
- Behavioral-based APT detection
- Multi-vector attack correlation
- Automated IOC extraction and analysis
- Real-time threat intelligence integration

Advanced Policy Framework

- Granular policy orchestration
- Cross-platform security standardization
- Automated compliance mapping
- Custom security baselines
- Policy-driven remediation workflows

Data Security

- Context-aware DLP engine
- Automated data classification
- Regulatory compliance enforcement
- Encryption key management
- Data sovereignty controls

Technical Details

Enterprise Integration

- REST API ecosystem
- SIEM/SOAR integration capabilities
- Identity provider (IdP) federation
- Custom webhook support
- Advanced logging and telemetry

Incident Response Automation

- Automated threat containment
- Incident playbook orchestration
- Real-time forensics collection
- Automated IOC distribution
- Cross-platform remediation

Regulatory Framework Compliance

- SOC 2 Type II (Security, Availability, Confidentiality)
- ISO 27001:2013
- GDPR Controls
- One-click HIPAA Compliance
- FedRAMP Ready **Coming soon*

Enterprise Support Infrastructure

- 24/7/365 Security Operations Center
- Dedicated Technical Account Management
- Advanced Threat Research Team
- Custom Threat Intelligence Feeds
- Security Advisory Services

**99.9% prevention rate for
phishing attacks that bypass
Microsoft security programs**
